Important Information

In connection with the proposed merger, Harmony has filed with the United States Securities and Exchange Commission ("SEC"), a registration statement on Form F-4, which includes a preliminary prospectus and related exchange offer materials, to register the Harmony ordinary shares (including Harmony ordinary shares represented by Harmony American Depositary Shares ("ADSs")) to be issued in exchange for Gold Fields ordinary shares held by holders located in the United States of America ("United States" or "US") and for Gold Fields ADSs held by holders wherever located, as well as a Statement on Schedule TO. Investors and holders of Gold Fields securities are strongly advised to read the registration statement and the preliminary prospectus, the related exchange offer materials and the final prospectus (when available), the Statement on Schedule TO and any other relevant documents filed with the SEC, as well as any amendments and supplements to those documents, because they contain important information. Investors and holders of Gold Fields securities may obtain free copies of the registration statement, the preliminary and final prospectus and related exchange offer materials and the Statement on Schedule TO, as well as other relevant documents filed with the SEC, at the SEC's web site at www.sec.gov and will receive information at an appropriate time on how to obtain transaction-related documents for free from Harmony or its duly designated agent.

This communication is for information purposes only. It shall not constitute an offer to purchase or exchange or the solicitation of an offer to sell or exchange any securities of Gold Fields or an offer to sell or exchange or the solicitation of an offer to buy or exchange any securities of Harmony in the US, nor shall there be any sale or exchange of securities in any jurisdiction in which such offer, solicitation or sale or exchange would be unlawful prior to the registration or qualification under the laws of such jurisdiction. The distribution of this communication may, in some countries, be restricted by law or regulation. Accordingly, persons who come into possession of this communication should inform themselves of and observe these restrictions. The solicitation of offers to buy Gold Fields ordinary shares (including Gold Fields ordinary shares represented by Gold Fields ADSs) in the US will only be made pursuant to a prospectus and related offer materials that Harmony is sending to holders of Gold Fields securities. The Harmony ordinary shares (including Harmony ordinary shares represented by Harmony ADSs) may not be sold, nor may offers to buy be accepted, in the US prior to the time the registration statement becomes effective. No offering of securities shall be made in the US except by means of a prospectus meeting the requirements of Section 10 of the United States Securities Act of 1933, as amended.

Forward-looking Statements

This quarterly report contains forward-looking statements within the meaning of the United States Private Securities Litigation Reform Act of 1995 with respect to Harmony's financial condition, results of operations, business strategies, operating efficiencies, competitive positions, growth opportunities for existing services, plans and objectives of management, markets for stock and other matters. Statements in this quarterly report that are not historical facts are "forward-looking statements" for the purpose of the safe harbor provided by Section 21E of the U.S. Securities Exchange Act of 1934, as amended, and Section 27A of the U.S. Securities Act of 1933, as amended. Forward-looking statements are statements that are not historical facts. These statements include financial projections and estimates and their underlying assumptions, statements regarding plans, objectives and expectations with respect to future operations, products and services, and statements regarding future performance. Forward-looking statements are generally identified by the words "expect," "anticipates," "believes," "intends," "estimates" and similar expressions. These statements are only predictions. All forward-looking statements involve a number of risks, uncertainties and other factors and we cannot assure you that such statements will prove to be correct. Risks, uncertainties and other factors could cause actual events or results to differ from those expressed or implied by the forward-looking statements.

These forward-looking statements, including, among others, those relating to the future business prospects, revenues and income of Harmony, wherever they may occur in this quarterly report and the exhibits to this quarterly report, are necessarily estimates reflecting the best judgment of the senior management of Harmony and involve a number of risks and uncertainties that could cause actual results to differ materially from those suggested by the forward-looking statements. As a consequence, these forward-looking statements should be considered in light of various important factors, including those set forth in this quarterly report. Important factors that could cause actual results to differ materially from estimates or projections contained in the forward-looking statements include, without limitation:

- overall economic and business conditions in South Africa and elsewhere;
- the ability to achieve anticipated efficiencies and other cost savings in connection with past and future acquisitions;
- decreases in the market price of gold;
- the occurrence of hazards associated with underground and surface gold mining;
- the occurrence of labor disruptions;
- availability, terms and deployment of capital;
- changes in Government regulation, particularly mining rights and environmental regulation;
- fluctuations in exchange rates;
- currency devaluations and other macro-economic monetary policies; and
- socio-economic instability in South Africa and regionally.

QUARTERLY HIGHLIGHTS

- Operational improvements and a higher gold price clearly demonstrate the high gearing that Harmony has.
- Leveraged shafts show a marked improvement following their restructuring.
- Increase in cash operating profit from R119 million in the September Quarter to R389 million.
- Cash operating costs decreased to R83 154/kg versus R85 718/kg in September.

CHIEF EXECUTIVE'S REVIEW - DECEMBER 2005

"Despite the low R/kg gold price environment that we have had to contend with during the last two years and the major restructuring exercise we went through, Harmony has stuck to its strategy to invest in our growth projects. I believe the company is now well positioned to pass the benefits from the improved gold price and the increased profitability through to our shareholders"

SAFETY REPORT

Safety achievements during this quarter:

Mine	Fatality free shifts achieved	Date
Merriespruit 3	1 950 000	30 November 2005
Masimong Mine	750 000	21 October 2005
Tshepong Mine	500 000	5 October 2005
Harmony 2	250 000	22 November 2005
Target	250 000	9 October 2005
Elandsrand	250 000	21 November 2005

The LTIFR increased by 2% from 16,99 in September 2005 to 17,27 in December 2005 and the SLFR in December 2005 climbed to 404 compared to 379 in September 2005, a regression of 6%. A factor that contributed to this was the reskilling and redeployment of some labour into new positions during the restructuring process and the fact that December is typically influenced by the Christmas break.

Fatality injury rate (per million hours worked)

Eleven employees lost their lives in ten separate incidents during the past quarter at our South African operations. Harmony Australia had no fatalities or serious incidents during the period under review. Safety remains a non-negotiable for Harmony and the company's drive towards zero fatalities remains a major area of focus.

PAST QUARTER UNDER REVIEW

Harmony's cash operating profit increased by R270,6 million from R118,8 million in September 2005 to R389,4 million in the December period. Production increased by 6% quarter on quarter to 653 171 oz and cash operating costs decreased by 3% to R83 154/kg. In US\$ terms, cash costs dropped by 3% to US\$396/oz. The price received increased by 11% from 91 888/kg to R102 333/kg in December, due to an increase in the US\$/oz price.

The performance of the company is best highlighted in the following table:

		December 2005	September 2005	Percentage variance
Production	– kg	20 316	19 219	6
Production	– oz	653 171	617 902	6
Revenue	– R/kg	102 333	91 888	11
Revenue	– US\$/oz	487	440	11
Cash cost	– R/kg	83 154	85 718	3
Cash cost	– US\$/oz	396	410	3
Exchange rate	– USD/ZAR	6.53	6.50	0

Restoring our operating profit margins

	December 2005	September 2005
Cash operating profit (Rm)	389,4	118,8
Cash operating profit margin	18,7%	6,7%

South African underground working costs increased from the R1 391,4 million in the September 2005 quarter to R1 451,2 million in the December period on the back of improved volumes.

On a group basis, working costs increased by 3% or R42 million from R1 647,4 million to R1 689,4 million.

Quarter on quarter cash operating profit variance analysis

Cash operating profit –September 2005	R118,8 million
– volume change (tonnes)	R86,5 million
– working cost change (%)	(R42,0) million
– recovery grade change (g/t)	R14,1 million
– Rand gold price change (R/kg)	R212,0 million
– net variance	R270,6 million
Cash operating profit – December 2005	R389,4 million

Analysis of earnings per share (SA cents)

Earnings per share	Quarter ended December 2005	Quarter ended September 2005
Cash earnings	99	30
Basic earnings	6	(82)
Headline loss	(75)	(86)
Fully diluted earnings	6	(82)
Adjusted headline loss*	(46)	(63)

* Excludes all unrealised gains/(losses) in financial instruments as well as the tax implications.

Reconciliation between basic earnings and headline loss

	Headline earnings in cents per share Quarter ended December 2005
Basic earnings	6
Profit on sale of mining assets	(3)
Profit on disposal of Gold Fields investment	(78)
Headline loss	(75)

Our cash earnings for the year to date total 129 cents per share.

FOCUS ON OUR GROWTH PROJECTS REMAINS

Despite the harsh financial and operating conditions encountered in the past year the company has remained focused on rebuilding its growth strategy. Accordingly expenditure on all of the local and international growth projects continued as planned. During the past quarter a total of R449 million was spent on capital. Of this R192 million was spent on project capital. Good progress continues to be made at our Phakisa, Masimong, Tshepong, Elandsrand New Mine and Doornkop South Reef projects locally. With our Hidden Valley project in PNG, the construction road has now reached the halfway mark. Good progress has also been made with the updating of the feasibility study.

Capital expenditure (Rm)

	Actual December 2005	Forecast March 2006
OPERATIONAL CAPEX		
South African Operations	219	189
Australasian Operations	38	34
Total Operational Capex	257	223
PROJECT CAPEX		
Doornkop South Reef	38	41
Elandsrand New Mine	31	33
Tshepong North Decline	14	22
Phakisa Shaft	30	26
Target Shaft	12	12
PNG	67*	24
Total Project Capex	192	158
TOTAL CAPEX	449	381

* Increase due to the purchase of the suite of equipment required for the Hidden Valley road construction as well as for the site bulk earthworks.

Our focus to grow the company with respect to ounces and quality continues and has led to a unique pipeline of projects in South Africa. The construction of our Hidden Valley Mine in PNG is well on track and we believe that it will demonstrate to our shareholders our ability to also build mines internationally.

Cash position - investing in our future

During the past quarter our cash balance has improved from R971 million to R2,914 million. The break down shows an operating contribution of R389,4 million being offset by R910,3 million spent on capex, corporate overheads and exploration, financing charges and working capital movements.

The proceeds on the disposal of our remaining investments in Gold Fields and Sangold have contributed a further R2,461 million to our cash balance.

Harmony Group cash reconciliation for December 2005

Cash and equivalents on 30 September 2005 (R'million)	970.8
Operational	(520.9)
Operating profit	389.4
Capex – net	(287.7)
Development cost capitalised	(161.0)
Corporate/Exploration expenditure	(104.1)
Employment termination and restructuring cost	(14.9)
Care and maintenance of non-operating shafts	(27.5)
Interest paid	(97.4)
Movement in working capital (excluding accrued liabilities)*	(257.9)
Movement in accrued liabilities	10.5
Other items	29.7
Other	2 464.4
Net sundry revenue	52.2
Foreign exchange losses	(20.5)
Shares issued – net of expenses	44.5
Avgold hedge payments – final instalment	(72.8)
Proceeds on sale of Gold Fields shares	2 441.7
Proceeds on sale of Sangold shares	19.3
Cash and equivalents on 31 December 2005	2 914.3

* The movement in working capital was negatively affected by a R122 million increase in the gold receivables at the end of the quarter, as well as the early payment of employees before the Christmas break amounting to R136 million.

Capital project progress

The detail of the South African brownfields growth projects are discussed under the various shaft sections. As the projects in PNG are greenfields in nature and do not deliver production ounces as yet, they are discussed under this section.

Hidden Valley project

The feasibility update has been progressing well and it is expected that we will be able to submit the final documented study update to the board by April 2006. This will include sign-off on all technical aspects of the study, as well as a cash flow model that will reflect the updated economics of the project.

Construction of the access road is progressing well with all road building equipment delivered to site. Pioneering has reached the 18.5km mark of the 40km road, with some difficult terrain ahead which will slow down the good progress made to date. It is expected that the pioneering crew will reach the proposed mine camp site by the end of May with road completion planned towards June 2006.

The Hidden Valley Environmental Management plan ("EMP") was completed and submitted to the Department of Environment and Conservation on 22 November 2005. This EMP has to be approved by the department before any site works can start. The department has three months to respond and question aspects of the plan after submission, which fits in with the proposed project construction timeline.

Cut-off and pit optimisation have resulted in significant project improvements, albeit at marginally lower recovery grades.

- Total recoverable ounces increased from 1.9M oz to 2.6M oz (which led to an increase in Life of Mine from 6.5 years to 9.5 years)
- Average head grade decreased to 2.2 g/t
- Strip ratio improved from 13:1 to 9:1
- Average annual bulk cubic metres (bcm) mined will be reduced from 19M bcm to 12M bcm

With the new design mill throughput has been planned to increase from 3.5 Mtpa to 4.2 Mtpa:

- Average gold produced per annum is planned at approximately 285 000 oz
- Total average silver produced per annum is planned at 3,9M oz which equates to 67 000 gold equivalent ounces
- The average cost per ounce will run at approximately US\$220/oz, net of silver credits

Re-engineered surface designs have led to:

- The tailings storage facility capacity being improved from 32 Mt to 43 Mt
- The waste dump's design now complying with acid rock drainage and other environmental commitments
- The establishment of a low grade stockpile with a capacity of 7 Mt (0.8g/t – 1.3 g/t)
- Cost and schedule improvements in the Pihema creek diversion
- Site bulk earthworks being done in-house, costed and scheduled more accurately

WAFI-GOLPU

Highlights for the quarter

- Drilling progressed well at Golpu. Geotechnical data was collected and visible copper mineralisation is present outside of the existing model at depth
- Notice of preparatory work and letter of intent have been submitted to the Department of Environment and Conservation
- Environmental studies have commenced, with stream gauging stations installed and water quality monitoring in progress
- Metallurgical test work indicates that 40% oxidation of sulphides gives 90% cyanidation gold recovery in Wafi Link Zone
- Wafi project has been well defined in a study concept report, which is to be used as the key reference for all parties involved with the study in the future

Work to be completed in the next quarter and beyond

Work to be completed will include:

- Continuation of drilling at Golpu using two drill rigs. Geotechnical data collection and the award of Golpu mining study work will also be required
- Appointment of engineering consultant, and commencement of metallurgical test work and processing plant design
- Continuation of environmental baseline monitoring
- Completion of a new model for Wafi non-refractory gold and for the Wafi link zone is to be undertaken in-house
- Commencement of scoping studies for mining and processing of the Link Zone and non-refractory gold ore

Wafi-Golpu pre-feasibility study

The December quarter has seen significant progress being made in building up the data base that is necessary for completion of the feasibility study. Continuation of the data gathering process and test work will be the main focus of the study programme for the next two quarters. Most technical mining studies have been planned to be completed during the second half of 2006.

Diamond drilling at Golpu progressed well, with two 800m holes completed, and a planned 450m hole drilled to 220m at the end of the quarter. Drill core collected to date has provided valuable geotechnical data and drill holes have also been used to collect hydrological data. Visual inspection of the core indicates that the copper porphyry extends beyond current model boundaries at depth. However assays from the first hole drilled are not expected until late in the March quarter.

Metallurgical test work of Wafi Link Zone ore continued throughout the month. The current testing programme is concentrating on establishing the suitability of bio-leaching and the programme is delivering encouraging results. Golpu Copper/Gold metallurgical test work is due to commence late in the March quarter, once sufficient drill core is available to blend suitable composite samples which represent the different ore zones present in the deposit. Road works on the Tlmini to Wafi Road were well advanced at the end of the quarter.

QUARTERLY OPERATIONAL REVIEW

Operational highlights were as follows:

- Bambanani went back to the areas affected by the fires of February 2005 and achieved an excellent turn around with the recovery grade improving by 28% and tonnage up by 18%
- With CONOPS being phased in on Tshepong and Masimong, volumes increased by 11% and 12%, respectively
- Evander 2 and 5 Shaft returned to profitability

A quarter on quarter operating profit analysis of the various operations:

Operations	December 2005 (R million)	September 2005 (R million)	Variance (R million)
Quality ounces	263,7	127,7	136,0
Growth projects	(2,5)	1,8	(4,3)
Leveraged ounces	76,0	(45,8)	121,8
Surface operations	10,9	5,5	5,4
Total South Africa	348,1	89,2	258,9
Australasian operations	41,3	29,6	11,7
Total	389,4	118,8	270,6

A detailed analysis of the operations is as follows:

Quality ounces - turnaround starting to show

Includes the following shafts: Target, Tshepong, Masimong, Evander and Randfontein's Cooke Shafts

		December 2005	September 2005
U/g tonnes milled	('000)	1 574	1 464
U/g recovery grade	(g/t)	6,10	5,96
U/g kilograms produced	(kg)	9 604	8 719
U/g working costs	(R/kg)	74 725	76 896
U/g working costs	(R/tonne)	456	458

Underground tons increased by 8% to 1 574 million tons during the quarter whilst recovery grades improved by 2% to 6.1 g/t. The combined effect of this was a 10% increase in gold production. Working cost in R/kg terms was reduced by 3% bringing the cost of production to R74 725/kg. Cost control in general was not satisfactory. The stronger gold price contributed to operating profit increasing by 106% to R263.7 million.

Target Mine

During the quarter the mine improved its flexibility by opening up more attacking points in the orebody. Machine availability however continued to fall and it was decided that the maintenance contract would be taken over by Harmony.

Volume levels therefore remained fairly constant with 166 000 tons compared to 168 000 tons the previous quarter.

With the improved flexibility and maintenance contract now being done in-house, it is expected that the coming quarter should see improved volumes at lower unit costs for Target which would lead to better profit levels.

Tshepong Mine

The shaft reached the safety milestone of 500 000 fatality free shifts on 5 October 2005.

After the CONOPS agreements were signed off by the company and the respective unions and associations, Tshepong succeeded in redeploying all its CONOPS labour by mid-November. The efficient re-introduction of CONOPS by the team contributed to an improvement of 11% in volumes. The recovery grade also improved by 7% to 6.85 g/t compared to the 6.42 g/t of the previous quarter, which led to gold production improving by 19% from 2 380 kg to 2 825 kg.

Total operating costs decreased from R69 225/kg to R65 272/kg.

TSHEPONG DECLINE PROJECT REVIEW

Access development

Summary

The project team managed to develop 608m in this quarter. This brings the total development now to 4 726m out of a total of 6 281m, which is 75% of total development required.

Chair lift decline

72% of the 900m has been completed. Delays occurred during the quarter as a result of the blasting of the 71 travelling way and the slipping of the chair lift landing at 71 level where poor ground conditions were encountered. Progress in this area has been stopped as a result of the ground conditions and work could only continue when the secondary support had been completed. This was done by the second week of January 2006 and normal development has commenced again.

Material decline

A total of 809m of the 1 050m has been completed. New support solutions and blasting techniques that have been implemented resulted in better ground conditions and improved face advances.

69 level access development

On 69 level 1 207m of the 1 830m have been completed. The rehabilitation of the area where a fall of ground of 22.5m took place delayed development of the South haulage. A decision was therefore taken to blast a loop around the affected area, as further delays were also expected with the installation of arches and foam

support which was required to make this area safe. Ground conditions dictated that the Haulage South be moved 30m to the west, thus increasing access development by 120m or two months. This change in design will, however, reduce risk significantly in the future.

69 Level reef and inclined waste development

95 Raise Line – 194m of the estimated 440m has been completed (44%).

96 Raise Line – 63m of the estimated 440m has been completed (14%).

71 Level access development

Development has also started on 71 Level during the quarter with 30m having been completed so far.

Project engineering

Overall project engineering was 59% completed during the quarter.

Although the project will be completed by February 2008, production should already commence during December 2007.

TSHEPDONG DECLINE

Total project 54% complete

Access development 75% complete

Capital cost update

	R million
Approved capital	280.2
Final estimated cost	280.3
Sunk capital	164.9
Remaining capital	115.4

IRR	32.4%

Tshepong decline

Sub 66 Decline Project

Masimong Mine

The mine achieved 1 000 000 fatality free shifts during January 2006.

With the phasing in of CONOPS, volumes increased by 12% to 232 000 tons. Grade however dropped by 6% to 4.7 g/t, which impacted negatively on the R/kg cost that went up to R96 573/kg. The Quality Mining Audit Team has been deployed on the mine to assist with getting the recovered grade back to planned levels which is around 5.5 g/t. The re-introduction of CONOPS will continue during the quarter and it is envisaged that it should be completed by March 2006. Masimong made a profit of R5.9 million for the quarter.

Masimong expansion project

For the quarter, capital expenditure amounted to R5.5 million and a total of 1 284m capital development was achieved. This was an improvement in excess of 200m on the previous quarter's achievement. The seasonal change to summer has put environmental conditions under the spotlight and a consultant has been brought in to look at current designs and optimise the available ventilation. A major water fissure was intersected on 1810 level and sealing operations have already started. It is anticipated that this process should take approximately four weeks to complete.

Evander Region

It was encouraging to see that Evander 2 and 5 shaft turned from the previous loss-making position (R12 million) to a profit of R12 million during this quarter. This was done on the back of improved volumes (+11%), grade (+25%) and real costs reduced by 2%. Volumes on 7 and 8 shafts improved by 8% and 7%, respectively. Total tons in the region for the quarter therefore went up from 374 000 tons to 402 000 tons, an improvement of 7.4%.

Recovery grades also improved by 1% which resulted in the gold production going up by 9% to 2 524kg. As stated in the previous reports it must be noted that 7 shaft has been mining in a very high grade pay shoot area and that it was not sustainable. Mining in this pay shoot has now been completed and subsequent grades will therefore be lower until such time that development has reached the next payshoot area.

Unit costs in R/kg terms came down by 3% to R72 021 and profit went up by 89% to R73.8 million.

Randfontein (Cooke Section)

Volumes were up by 5% from 345 000 tons to 362 000 tons. Recovery grades went up by 8% from 5.4g/t to 5.8 g/t which increased gold production by 13%, to 2 113kg. Cost in real terms came down from R160.6 million to R154.7 million, a reduction of 4%. Unit costs came down by 15% from R85 767 to R73 207, which increased profit by R48.4 million from R11.3 million in the previous quarter to R59.7 million in the December quarter, demonstrating the high gearing that these operations have.

Leveraged operations - significant operational turnaround at most shafts

Shafts included under this section are: Bambanani, Joel, West Shaft, St Helena 8, Harmony 2, Merriespruit 1 and 3 Shafts, Unisel, Brand 3 and Orkney 2 and 4 Shafts.

		December 2005	September 2005
U/g tonnes milled	('000)	1 252	1 218
U/g recovery grade	(g/t)	4,88	4,42
U/g kilograms produced	(kg)	6 113	5 380
U/g working costs	(R/kg)	90 074	100 158
U/g working costs	(R/tonne)	440	442

With the restructuring completed, major focus was placed on improving quality on these shafts. Volumes improved by some 3%, but recovery grades had an improvement of more than 10%. This led to gold production being up by 14% to 6 113 kg. Although real cost went up by 4%, unit cost in R/kg terms came down by 10% to R90 074, giving our leveraged operations a profit margin of 14% taking the average gold price received of R102 333. As a result of the improved volumes, grades and revenue received, a profit of R76.0 million was realised compared to a loss of R45.8 million in the previous quarter.

The star performer in this area has been Bambanani which returned a profit of R28.3 million after making a loss of R31.6 million in the previous quarter. Two other shafts that have performed significantly better for the quarter were Unisel, from break-even in the September quarter to a profit of R23.4 million and Harmony 2, from a loss of R5.0 million in the previous quarter to a profit of R17.2 million.

SA surface operations (includes Kalgold)

		December 2005	September 2005
Surface tonnes milled	('000)	938	838
Surface recovery grade	(g/t)	0,99	1,47
Kilograms produced	(kg)	926	1 228
Working costs	(R/kg)	89 849	87 029
Working costs	(R/tonne)	89	128

Kalgold

As reported during the previous quarter, an unstable ground condition had been developing on the eastern wall of the D Zone pit, which had to be addressed during the December quarter. Work therefore was stopped in the D Zone and mining only continued in the lower grade A Zone. Although production levels continued to improve during the quarter by another 4% to 468 000 tons, recovery grades were down by 27%. It must be

noted that this is a temporary drop in grade and that work will be completed during the March 2006 quarter after which mining operations will return to the D Zone again. Despite the significant drop in grade, unit costs in Rand per kilogramme terms were only up by 19% due to good cost control and improved volumes. Rand per ton cost came in at R129/t which was 14% lower than the September quarter. Kalgold profit for the quarter decreased to R8.5 million (September 2005 – R15 million).

Growth projects - Elandsrand, Doornkop and Phakisa

		December 2005	September 2005
U/g tonnes milled	('000)	312	315
U/g recovery grade	(g/t)	5,63	6,33
U/g kilograms produced	(kg)	1 756	1 995
U/g working costs	(R/kg)	104 188	91 253
U/g working costs	(R/tonne)	586	578

Good progress continues to be made on the delivery of our growth projects. Volumes from the operating mines however decreased by 12.1% to 1 756 kg (September 2005 – 1 995 kg) and operating costs increased by 14% to R104 188/kg. The main impact here was made by Elandsrand mine.

ELANDSRAND NEW MINE PROJECT

Infrastructure

During the quarter the sinking and equipping of the No. 2 Service shaft progressed to within 13m of 102 level. The civil construction of 115 level pump station was completed during the quarter, which allowed the mechanical and electrical installation to begin. The raise boring of the 92 level turbine dam centre hole was completed during the quarter and this now allows the slipping of the dam to start. The additional ore pass (between 100 level and the existing ore pass system) has progressed well during the quarter. It is envisaged that the linking between the rock pass systems of the old mine and the new mine will take place during the next quarter. The rock loading system at 115 level has also been completely commissioned and has been operational for the December quarter. The complete loading system on 115 level and shaft bottom spillage arrangement has been completed and will be handed over to the mine during January 2006.

Access development

The progress on 109 level access development has been excellent during the quarter. An average advance of 90m per month has been achieved, on both the haulage and the return airway. The progress on 113 level has been hindered by the amount of methane that has been intersected on a number of occasions from diamond drilling holes. After discontinuing development on 113 level on 23 June 2005 due to a methane intersection, the end was started again on 9 December 2005 after it had been declared safe to continue with operations.

Doornakop South Reef capital project

Station development continued on 202, 207 and 212 levels, with preparations underway to start-up station work on 205 level as well. Access development continued on 192 level and 197 level. Good progress was made on three separate reef raises on 192 level and the travelling way position to the first raise has also been reached on 197 level.

Shaft-sinking operations went well during the quarter and 80m have been sunk, lined and equipped since September, from below 132 level. The rate of sinking has been increasing steadily by a consistent 13,5m per week being achieved in November.

Sliping of the shaft to final diameter from 197 level is presently underway. This operation has progressed 100m from 197 level past 205 level where the station was cut and is now at the 207 level position where station-cutting operations are almost completed. Shaft-sinking resumed from below 207 level to 212 level early in January 2006. It is planned that the portion of shaft between 197m to 40m below 212 level will be sliped to final diameter by the time the sinking operation above reached 192 level. This should take place during May 2006.

The updated schedule provides for the main shaft to be partially commissioned (excluding the additional rock winder) by the end of 2006. Production will ramp-up over the next three years to 135 000 t/m of ore.

During the past quarter a commissioning team has been put together to start preparing for commissioning the new mine. Implementation plans have been drawn up for successful commissioning.

Highlights

- Hedge position reduced by another 10 000 ounces during the quarter
- Production ounces increased by 11% at Mt Magnet
- Further good exploration drill results for open pit resource at South Kal Mines
- Achieved two years' Lost Time Injury ("LTI") free at Mt Marion underground at South Kal Mines
- Production commenced at St George underground at the Mt Magnet operations

The Australian operations generated an operating profit of A\$8.5 million in the December quarter compared to A\$6.0 million in the previous quarter. Given that the production profile remained the same, this improvement was a direct result of the 10% improvement in the gold price received per ounce in Australia during the quarter. Delays in ramping up production at the St George underground at our Mt Magnet operations, and lower production at Mt Marion underground at our South Kal Mines contributed to the operation not achieving targeted production for the quarter. Capital expenditure decreased significantly from A\$12.7 million in the previous quarter to A\$7.7 million in the current quarter, mainly as a result of a reduction in expenditure on the St George underground mine, which has now been commissioned, as well as the completion of the tailings dam lift at the Mt Magnet operations.

During the quarter 10 000 ounces of calls were closed out. These out of the money hedge positions were inherited with the acquisition of Hill 50 and have an average strike price of A\$515. The negative mark to market valuation of the outstanding hedge commitments at quarter end amounted to A\$104 million, based on an A\$ spot price of A\$703/oz.

Mount Magnet

Mt Magnet operations produced 38 394 ounces of gold in the December quarter from the milling of 443 290 tonnes of ore, compared to the production of 34 463 ounces of gold and the milling of 422 843 tonnes of ore in the September quarter. This resulted in a cash operating profit of A\$5.4 million for the site in the current quarter compared to A\$4.5 million in the previous quarter.

Underground production increased from 18 940 ounces in the previous quarter to 21 647 ounces in the current quarter, mainly as a result of additional ounces being produced by St George. 104 108 underground tonnes were milled at 6.47 g/t in the quarter compared to 77 619 underground tonnes milled at 7.59 g/t in the previous quarter. Full production at the St George underground was delayed until the middle of December due to additional orebody definition work resulting in increased resource ounces for the first stoping level, requirements for additional ground support in the crown pillar and delays in ventilation establishment. All of these resulted in less ounces produced than forecast for the period. This problem has however been resolved and it is expected that this will result in increased development and production rates from St George in the March quarter. The drill programme of the Water Tank Hill lodes, which are accessible from the St George underground is continuing, with 5 holes from a 12-hole phased programme completed with a number of mineralised zones intersected at target positions. These results will be modelled and subjected to a feasibility study in the March quarter. Depth extensions to the Northern lodes at St George which potentially could add additional levels to the mine will also be subjected to a drill programme in the March quarter.

Open pit mining is continuing in the Cue region, with expected completion of operations in May, after which open pit mining will resume around Mt Magnet. Production increased slightly in the current quarter to 16 747 ounces compared to 15 523 ounces in the previous quarter, however slips in the Rheingold pits continued to impact on ounces produced during the quarter.

71 000 ounces has been added to the Indicated Mineral Resource category since the start of the regional exploration drilling programme around the Mt Magnet and Cue regions in June 2005. 18 600 of these ounces have been converted to open pit reserves and will be mined in the near future. This drill programme is continuing, with a number of new targets which will be followed up in the March quarter. As part of the process of adding production ounces to these operations various discussions were held with parties controlling prospective tenements and projects within the Mt Magnet region. These discussions will be pursued in the current quarter.

The conversion of the diesel power station to gas is set to be completed by early February, with a number of gas generators already in operation. This conversion will reduce milling unit costs by 13% going forward.

South Kal Mines ("SKM")

Mt Marion underground mine at our South Kal operations achieved two years' LTI free production shifts during the December quarter, which is an exceptional performance for an underground operation. The operation produced 23 239 ounces of gold in the quarter compared to 26 540 ounces in the September quarter from the milling of 337 566 tonnes of ore.

Ground stability problems due to increased stress levels within the lower stope access drives at Mt Marion severely affected underground ore production in the quarter. Tonnage from underground was 103 430 tonnes at 4.21 g/t compared to the previous quarter's production of 130 145 tonnes at 3.99 g/t. It is expected that these underground conditions will require increased ground support and drive rehabilitation activities going forward, which will affect production. As planned decline development stopped during the quarter as the economic depth limit has been reached, which will effectively put the mine in harvest mode and reduce capital expenditure going forward.

Negotiations with the underground contract mining company which was initiated last quarter were concluded during the quarter, with a new contract on the verge of being signed. The terms of the new contract will result in an increase in underground mining costs going forward.

Jubilee plant has seen general improvements in reagent consumption as a result of the upgraded gravity extraction unit which was installed in the previous quarter. Throughput rates however were reduced towards the end of the quarter as a result of problems with the crushing circuit which resulted in unscheduled down time. These problems have now been addressed.

Low grade stockpiled ore from various completed open pit mine areas is continuing to be trucked to the Jubilee mill to provide blending options with the underground Mt Marion ore.

A process has been initiated which will investigate the feasibility of doing an additional cutback on the HamptonBoulderJubilee ("HBJ") pit. The pit which has been mined previously contains significant gold resources which may be economical to mine in the current gold price environment. A recommendation on whether to proceed with mining the pit or not will be made to the board in the June quarter.

Exploration work during the quarter at SKM focused on the Shirl prospect on Location 59. Reverse circulation and diamond drilling was utilised to test the bedrock below shallow RAB/aircore intercepts, as reported in the previous quarter and yielded some outstanding results:

05BSRC058	20m @ 4.8 g/t Au from 39m
	16m @ 9.9 g/t Au from 76m
05BSRC060	9m @ 5.5 g/t Au from 78m
	3m @ 25.0 g/t Au from 110m
05BSRC064	5m @ 9.7 g/t Au from 73m
	3m @ 9.1 g/t Au from 90m
05BSRC068	19m @ 6.4 g/t Au from 105m
05BSRC069	14m @ 4.3 g/t Au from 73m
05BSDD003	13m @ 6.5 g/t Au from 112m
05BSDD004	11m @ 15.7g/t Au from 146m

The Main zone of mineralisation defined to date strikes northeast, dips to the northwest and is hosted in differentiated gabbro. Continuity of mineralisation has been established over 250m of strike and to a vertical depth of 140m below surface. Currently the Main zone is open along strike and at depth.

Drill intercepts have also highlighted potential for additional lodes sub-parallel with the Main zone and on the western gabbro/ultramafic contact. However, infill drilling is required to increase confidence in the continuity of these lodes.

A full scale resource/reserve definition drilling to scope out the size and extent of the deposit will proceed in the March quarter, as statutory clearing permits have now been received.

The site showed a cash operating profit for the quarter of A\$3.1 million compared to A\$1.5 million in the September quarter.

OTHER PROJECTS

Northern Territory Burnside Joint Venture (50%)

As reported in the previous quarter Northern gold NL has contracted to purchase Harmony's 50% interest in the Burnside Joint Venture for a series of staggered cash and share payments. The first instalment comprising A\$4 million cash, A\$1 million bond replacement and A\$5 million in the shares of Northern Gold's Toronto-listed parent company, GBS Gold International Inc, is due at the beginning of April 2006. The second instalment is due in early October 2006 (A\$5.0 million cash and A\$4.4 million in GBS shares) and the final instalment (A\$5.35 million cash) is due in October 2007.

The pre-conditions to the Sale and Purchase Agreement have now all been satisfied, other than for Northern Gold/GBS raising the necessary cash. GBS is planning to complete this raising in the North American capital markets in early February 2006, with various technical and regulatory documents having already been filed with the Canadian Regulatory Commissions. The Burnside JV continues to operate within budget, with recent activities focused on care and maintenance activities for the Northern Territory wet season. Planning activities will shortly turn to the handover of administration, accounting and tenement reporting activities to Northern Gold/GBS.

As soon as all the conditions precedent is met we will account for the sale.

NOTES TO THE RESULTS FOR THE PERIOD ENDED 31 DECEMBER 2005

1. Basis of accounting

The unaudited results for the quarter have been prepared using accounting policies that comply with International Financial Reporting Standards (IFRS). These consolidated quarterly statements are prepared in accordance with IFRS 34, Interim Financial Reporting. The accounting policies are consistent with those applied in the previous financial year, except for the adoption of the revised international accounting standards forthcoming from the IAS improvements project and the changes which are described in Notes 2 and 3.

2. New accounting policies adopted

(a) Share-based Payments (IFRS 2)

On 1 July 2005, the Company adopted the requirements of IFRS 2, Share-based Payments. In accordance with the transitional provisions, IFRS 2 has been applied to all grants of equity-settled payments after 7 November 2002 that were unvested at 1 January 2005. The Company issues equity-settled instruments to certain qualifying employees under an Employee Share Option Scheme to purchase shares in the Company's authorised but unissued ordinary shares. Equity share-based payments are measured at the fair value of the equity instruments at the date of the grant. The total fair value of the options granted is recorded as deferred share-based compensation as a separate component of shareholders' equity with a corresponding amount recorded as share premium. The deferred share-based compensation is expensed over the vesting period, based on the Company's estimate of the shares that are expected to eventually vest. The Company used the binominal option pricing model in determining the fair value of the options granted.

The impact of this adjustment on the net profit/(loss) is an expense of R63 million for the December 2005 year to date (December 2004 year to date: R30 million) (December 2005 quarter: R30 million) (September 2005 quarter: R33 million) (December 2004 quarter: R19 million).

(b) Determining whether an arrangement contains a lease (IFRIC 4)

On 1 July 2005, the Company applied the requirements of IFRIC 4, Determining whether an arrangement contains a lease. The objective of the interpretation is to determine whether an arrangement contains a lease that falls within the scope of IAS 17, Leases. The lease is then accounted in accordance with IAS 17. The application of the interpretation had no impact on the results of the quarter or any prior reporting period.

3. Change in accounting policy

(a) Capitalisation of mine development costs

Previously mine development costs were capitalised when the reef horizon was intersected. Expenditure for all development that will give access to proven and probable ore reserves will now be capitalised. Capitalised costs are amortised over the estimated life of the proven and probable reserves to which the costs give access.

The impact of this adjustment on the net profit/(loss) is as follows:

- A decrease in the cash operating costs of R297 million for the December 2005 year to date (December 2004 year to date: R315 million) (December 2005 quarter: R161 million) (September 2005 quarter: R136 million) (December 2004 quarter: R156 million).

- Additional amortisation charges of R146 million for the December 2005 year to date (December 2004 year to date: R112 million) (December 2005 quarter: R75 million) (September 2005 quarter: R71 million) (December 2004 quarter: R57 million).
- Taxation effect of the capitalised development costs and additional amortisation charges of R31 million for December 2005 year to date (December 2004 year to date: R38 million) (December 2005 quarter: R18 million) (September 2005 quarter: R13 million) (December 2004 quarter: R19 million).

4. Derivative financial instruments

Commodity contracts

The Harmony Group's outstanding commodity contracts against future production, by type at 31 December 2005 are indicated below. The total net delta of the hedge book at 31 December 2005 was 455,379 oz (14,164 kg).

Year		30 June 2006	30 June 2007	30 June 2008	30 June 2009	Total
AUSTRALIAN DOLLAR GOLD						
Forward contracts	Kilograms	3,110	4,572	3,110	3,110	13,903
	Ounces	100,000	147,000	100,000	100,000	447,000
	AUD per oz	511	515	518	518	515
Call options sold	Kilograms	–	311	–	–	311
	Ounces	–	10,000	–	–	10,000
	AUD per oz	–	562	–	–	562
Total commodity contracts						
	Kilograms	3,110	4,883	3,110	3,110	14,214
	Ounces	100,000	157,000	100,000	100,000	457,000
Total net gold*	Delta (kg)	3,110	4,874	3,099	3,080	14,164
	Delta (oz)	99,991	156,707	99,642	99,039	455,379

* The Delta of the hedge position indicated above, is the equivalent gold position that would have the same marked-to-market sensitivity for a small change in the gold price. This is calculated using the Black-Scholes option formula with the ruling market prices, interest rates and volatilities at 31 December 2005.

These contracts are classified as speculative and the marked-to-market movement is reflected in the income statement.

The mark-to-market of these contracts was a negative R486 million (negative USD77 million) at 31 December 2005 (at 30 September 2005: negative R345 million or negative USD54 million). The values at 31 December 2005 were based on a gold price of USD514 (AUD704) per ounce, exchange rates of USD1/R6.33 and AUD1/USD0.73 and prevailing market interest rates and volatilities at that date. These valuations were provided by independent risk and treasury management experts.

At 27 January 2006, the marked-to-market value of the hedge book was a negative R557 million (negative USD91 million), based on a gold price of USD559 (AUD741) per ounce, exchange rates of USD1/R6.11 and AUD1/USD0.75 and prevailing market interest rates and volatilities at that time.

These marked-to-market valuations are not predictive of the future value of the hedge position, nor of the future impact on the revenue of the company. The valuation represents the cost of buying all hedge contracts at the time of the valuation, at market prices and rates available at the time.

Harmony closed out 10,000 oz call option contracts during the quarter ended 31 December 2005 at a cost of R3.3 million (USD500,000). During the quarter ended 30 September 2005, Harmony closed out 20,000 oz call option contracts and 8,000 oz forward contracts, at a cost of R4.3 million (USD680,000).

Interest rate swaps

The Group has interest rate swap agreements to convert R600 million of its R1,2 billion fixed rate bond to variable rate debt. The interest rate swap runs over the term of the bond, interest is received at a fixed rate of 13% and the Company pays floating rate based on JIBAR plus a spread ranging from 1.8% to 2.2%.

These transactions which mature in June 2006 are designated as fair value hedges. The marked-to-market value of the transactions was a positive R11 million (USD2 million) at 31 December 2005, based on the prevailing interest rates and volatilities at the time.

Currency contracts

Harmony inherited currency contracts with the acquisition of Avgold. These currency contracts matured on 31 December 2005 and was closed out accordingly. The contracts were classified as speculative and the mark-to-market movement was reflected in the income statement.

The mark-to-market of these contracts was R NIL (USD NIL) at 31 December 2005 (30 September 2005: negative R64 million or negative USD10 million). These values were based upon an exchange rate of USD1/R6.35 at 30 September 2005 and prevailing market interest rates at the time. Independent risk and treasury management experts provided these valuations.
