REVIEW FOR THE QUARTER ENDED 31 March 2002

A BUSINESS APPROACH TO MINING

CREATING STAKENOLDER VALUE

HARMONY

This review includes certain information that is based on management's reasonable expectations and assumptions. These "forward-looking statements" include, but are not limited to, statements regarding estimates, intentions and beliefs, as well as anticipated future production, mine life, market conditions and costs. While management has prepared this information using the best of their experience and judgment, and in all good faith, there are risks and uncertainties involved which could cause results to differ from projections.

Cautionary Note to US Investors – The United States Securities and Exchange Commission (the "SEC") permits mining companies, in their filings with the SEC, to disclose only those mineral deposits that a company can economically and legally extract or produce. We use certain terms in this quarterly review, such as "resources", that the SEC guidelines strictly prohibit us from including in our filings with the SEC.

- record cash operating profit of R851 million
- 87% increase in e.p.s from 206 cents to 386 cents
- earnings per share financial year to date of 656 cents
- cost focus results in R37,4 million or 3% reduction in total working costs
  - company now operates with total cash cost of US\$176/oz, a cash operating profit margin of 38%
  - closure of "inappropriate" hedge book of Randfontein at after tax cost of R125 million
  - 5 key operations generating in excess of R100,0 million per quarter, i.e. Free State, **Evander, Randfontein, Elandskraal and Free Gold JV**

"Gold remains everybody's alternative currency, but unfortunately nobody's responsibility. Even without any central bank support it has still been the second best performing major currency in the world, after the US Dollar, over the past 12 months."

## **BERNARD'S REVIEW**

### **SAFETY REPORT**

It is with regret that I have to report the loss of five employees, following five separate mine accidents, during the past quarter. Four of the five accidents were as the result of a fall of hanging wall in the work places. Regrettably, one of the fatalities occurred on Brand 5 mine which had already achieved the benchmark of 500 000 fatality free shifts. We offer our sincere condolences to the family, friends and colleagues of these employees.

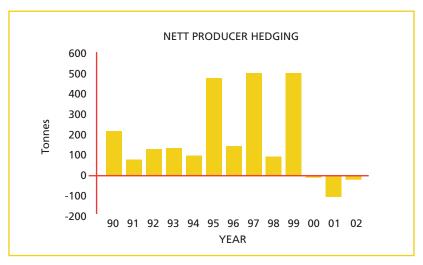

Notwithstanding the above mentioned unfortunate events, it is with pride that we can report that Cooke 3 mine achieved the milestone of one million fatality free shifts on 14 March 2002.

## STRATEGIC OVERVIEW

The past quarter has seen significant changes in the operating environment in South Africa. Whilst the gold price has increased to levels of US\$300/oz, the South African Rand experienced further weakness. The depreciation of our local currency continued with the Rand averaging R11,53 to the US Dollar for the March 2002 quarter. This is an additional 14,7% when compared quarter on quarter.

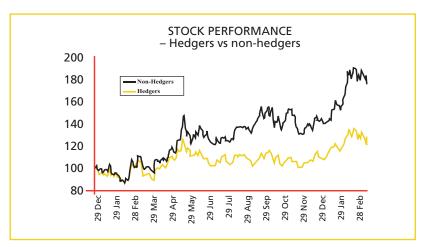

Events during the quarter which impacted positively on the gold price were the increased retail purchasing of physical gold by the Japanese market and the continued decrease in the supply of bullion which will reach the market following the reduction of producer production and nett hedging activities. Positive comments from large producers regarding reduced hedging substantiated the figures supplied by GFMS.

Gold equities were a top-performing sector in 2001, significantly outperforming the broader markets. Gold remains everybody's alternative currency, but unfortunately nobody's responsibility. Even without any central bank support it has still been the second best performing major currency in the world, after the US Dollar, over the past 12 months. This trend has continued in the past quarter with a higher level of portfolio diversification by investors being experienced.

Source: Gold Fields Mineral Services

Although analysts have indicated that gold stocks are currently discounting gold prices above US\$300/oz, the consolidation of the gold industry has resulted in fewer stocks being available. The outperformance of unhedged producers over hedged producers has increased significantly following the increase in the gold price. Harmony has and will continue to be unhedged by choice. Other producers may correctly claim to have made money out of hedging, but Harmony has demonstrated that being unhedged has been the smart choice when it came to creating shareholder value. No doubt others will continue to follow.

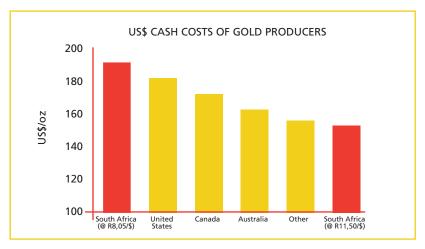

Source: Bloomberg

On 10 April 2002 the company announced that it had completely closed the Randfontein hedge book. This hedge book, which I described as "inappropriate" for a gold mining company at the time, came with the company in January 2000. A total of 490 000 ounces in respect of the remaining forward sales contracts and call options were closed. In addition, as a result of the higher gold price, the company closed a further 220 000 ounces of forward purchases.

The closure of the hedge book resulted in a net cost after tax of R125 million (US\$ 11 million), which has been financed from existing cash resources. The company will continue restructuring the inherited hedge books of New Hampton and Hill 50 as and when the market conditions allow.

The further 14,7% devaluation of the South African Rand over the past quarter has significantly impacted on the profitability of the South African producers. At R8,05 to the US Dollar, local producers were the most expensive producers when measured on a cash cost basis. At R11,50 to the US Dollar, the South African industry has become the lowest cost region. This has resulted in increased profit margins. Harmony now operates at a cash cost of US\$176/oz and a total cost of US\$207/oz. With a real profit margin of approximately US\$100/oz Harmony could rightfully claim to be one of the most profitable gold mines in the world, if not the most, and yet we have spectacular leverage remaining in the gold price, the Rand currency and the largest resource in the world.

Source: Company reports and Schroder Salomon Smith Barney

The company has decided not to pursue increased production at higher working costs with the potential of diluting profits, until we have re-established firm control over unit costs on our South African operations. The South African industry has in the past year seen profit erosion due to the pressure from higher working costs due to inflation and increased demands from various stakeholders. At Harmony we, some six months ago, embarked on a cost reduction campaign, known as "The Cost Marathon", and although it's early days yet, we saw a 3% or R37,4 million reduction in total working costs during the March 2002 quarter.

The current higher gold price levels will be used to allow the company more flexibility in its planned mining programmes, thereby optimising operating profit margins and increasing profits. To date, the operations have not been starved of capital expenditure and no "catch-up" expenditure is required. At gold price levels of R105 000/kg, Harmony has probably the most prospective mining projects remaining in South Africa, i.e. Randfontein South Reef Project, the Rolspruit Extension and Poplar Project at Evander. These projects are being evaluated, but the company will only consider developing these assets when market conditions are such that long lead time high capital projects of this nature show better returns than acquisitions with turnaround potential.

With gold at levels of US\$300/oz, we believe that the consolidation of the industry will continue. Lower exploration expenditure and the high cost of replacing the ounces currently being produced are factors which will provide continued impetus for consolidation.

The company experienced a successful quarter on both a strategic and operational level. Harmony continued with its strategy of growth with the:

## (i) Conclusion of the acquisition of Free Gold from AngloGold

Although the JV company, Free Gold (Pty) Limited, took operational control of the assets on 3 January 2002, the remaining conditions precedent to the acquisition were met on 10 April 2002. The acquisition was concluded with the payment of R900 million by Harmony and ARMgold respectively on 23 April 2002. The outstanding amount of R400 million will be paid by Free Gold on 1 January 2005. AngloGold has decided not to appeal a ruling from the South African Revenue Services regarding the tax relief sought in terms of Section 39, and an amount of approximately R500 million will be payable by Free Gold in March 2003. As reported previously the JV company will be able to claim a significant portion of the purchase price as a capital expenditure against taxable income. Under the current gold price conditions, this option enhanced the NPV of the project by some R200 million as compared to the original option for which the exemption was sought.

From an operational perspective the Free Gold assets generated improved cash operating profits of R402,8 million, significantly ahead of the conservative estimates used for acquisition and financing purposes.

A summary of the results follows:

| (R'million)  | Mar ′02   | Dec '01 | Var (%) |
|--|---|---------|---------|
| Cash operating profit Net interest charges* Amortisation charges Profit before tax Due to ARMgold Due to Harmony | 402,8<br>35,4*<br>26,8<br>340,6<br>170,3<br>170,3 | 261,5   | 54,0    |

<sup>\*</sup> Interest was payable to AngloGold in lieu of the purchase price for 3 months.

The operational restructuring has been proceeding according to plan. Normally, during the first quarter following the acquisition of assets of this nature, the changeover in ownership impacts on employees and the overall performance of the operations. The fact that the Free Gold assets were acquired in a JV company had challenges of their own, but we are extremely satisfied with the level of co-operation that has been established between the two parties. This has made the task of the Steering Committee, who took control of implementing the broad strategies identified in the due diligence phase, easier.

Free Gold now operates at a profit margin of US\$136 or 47% per ounce at a gold price of US\$290/oz. Our strategy of acquiring these operations as part of consolidating the Free State goldfields has already delivered value to our shareholders.

| Total mine results    | Mar '02 | Dec '01 | Var (%) |
|-----------------------|---------|---------|---------|
| Gold price US\$/oz    | 290     | 261     | 11,1    |
| Cash cost US\$/oz     | 154     | 188     | 18,1    |
| Profit margin US\$/oz | 136     | 73      | 86,3    |
| Exchange rate:        |         |         |         |
| Rand per US\$         | 11,53   | 10,30   | (11,9)  |

All the shafts at Free Gold were profitable despite the impact of restructuring activities. Bambanani and Tshepong mines contributed R317,0 million or 79% of the operating profits of R402,8 million. We expect that the contribution from Matjhabeng and Joel mines and the surface operations will improve during the following year.

Free Gold has been successful in addressing the high overhead costs that impacted on the short-term profitability of these operations. When measured on the "Harmony Value Curve" these operations are on the steep upward performance stage delivering excellent cash operating profits. Our focus however will be on improving tonnages at slightly lower grades, but delivering optimal gold production and cash operating profits.

We generally inherit mature mines that are in the process of being highgraded. It is our intention to return to mining these operations at the average mining grade of the orebodies whilst increasing expenditure on working cost development.

## (ii) Broadening our production base in Australia

Excellent progress was made with the take-over offer for Hill 50 announced on 10 December 2001. To date Harmony has received acceptances of approximately 99% of the shares and options. The process of the compulsory acquisition of the remaining shares and options has commenced in accordance with Australian law. In terms of the current timetable the process should be completed by June 2002. The acquisition was concluded with a final offer of A\$1,45 for each ordinary share and A\$0,75 per listed option in Hill 50 valuing the transaction at R1 411 million and Australian \$231 million.

The acquisition of Hill 50 has increased Harmony's Australian production base from approximately 220 000 oz/annum to a sizeable 500 000 oz/annum. The company now has a solid production base with a package of highly prospective exploration areas in West and eastern Australia. The company is in a stronger position in Australia to what it had been in South Africa in 1996, building a company from modest assets to the fifth largest producer in the world today.

Hill 50 has increased production over the past two years to the approximately 300 000 oz forecast for the 2001/2002 financial year.

| Hill 50            | 2001/<br>2002 | 2000/<br>2001 | 1999/<br>2000 | 1998/<br>1999 |
|--------------------|---------------|---------------|---------------|---------------|
| Gold produced (oz) | 290 000       | 202 000       | 150 000       | 150 000       |
| Cash cost A\$/oz   | 322           | 330           | 358           | 310           |
| Cash cost US\$/oz  | 169           | 176           | 224           | 194           |

These producing assets and our 9,8% holding in Aurion Gold valued at R663,0 million will ensure our participation in the continued consolidation of the Australian gold industry.

## (iii) Delivery of value to Simane – Black Economic Empowerment on track

Harmony shareholders agreed, in a general meeting in May 2001, to issue 10,9 million Harmony ordinary shares for cash to the IDC and Simane, a black economic empowerment company. The IDC subscribed for 10,7 million ordinary shares on behalf of Simane and Simane themselves subscribed for 0,2 million ordinary shares. In addition, the IDC, on behalf of Simane, subscribed for 10,9 million redeemable convertible preference shares, each share granting the company the right to subscribe for a Harmony ordinary share at R41,50.

The preference shares were converted into ordinary shares and were placed in the market from 16 January 2002 to 4 February 2002, realising an average price of R85,46 per ordinary share. This has enabled Simane to take transfer of the ordinary shares after the repayment of their loans. Harmony's cash resources increased by R430 million as a result of this initiative.

Simane now hold 10,9 million unencumbered shares in Harmony, representing 7 per cent of Harmony's issued ordinary share capital, making it the company's largest shareholder.

## (iv) Granting of option to Gold Fields Limited to acquire a stake in Aurion Gold and option by Harmony to negotiate for the acquisition of St Helena and Oryx mines

The options granted by the respective companies expired on 15 February 2002 without any agreements being reached. Value will however be created with the inclusion of St Helena in the continued consolidation of the Free State Goldfields. The possible acquisition of these assets will be revisited in future.

## (v) Listing on Chicago Board Options Exchange

On 2 April 2002 the company was informed that it had been selected for listing on the Chicago Board Options Exchange. Trading in the option was set to start on 3 April 2002 and it is expected to impact on the tradability of Harmony stock on the various exchanges.

The Chicago Board Options Exchange is the world's largest options market.

## (vi) Listing on Berlin Stock Exchange

To enable institutional and retail shareholders to acquire and trade Harmony stock in their domestic currency, the company was listed on the Berlin Stock Exchange. Trading started on 20 March 2002 under the symbol HAM1.

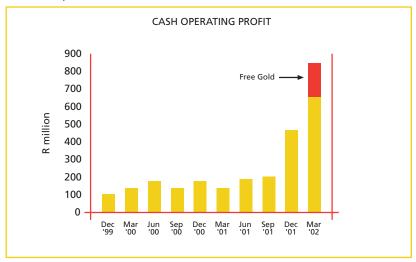

## (vii) Kalplats Project

R3,0 million was spent on this project during the quarter. Exploration drilling has added 500 000 oz to the mineral resources which currently stands at 3,8 million oz at 1,5 g/t TPM (Total Precious Metals) in the indicated and inferred categories to 150m depth. Included in this resource is 1,5 million oz of higher grade reef at 3,7 g/t TPM.

The pre-feasibility drilling and metallurgical studies are continuing. A total of 41 infill boreholes representing 3 160m were drilled. Metallurgical work on representative drill samples is in progress to test provisional process flowsheets. The prefeasibility study will be completed by June 2002.

## **QUARTERLY OPERATIONAL REVIEW**

The company reported improved operational profits of 87%, increasing from R455,2 million to a record R850,9 million. This was due to the inclusion of R201,4 million in respect of the Free Gold JV (50%) and the increase in gold price in R/kg terms following the continued depreciation of the Rand against other major currencies. Our focus on working costs is delivering excellent results with the operations reporting a 3% or R37,4 million reduction in working cost expenditure. Kilograms recovered from the operations were 13% higher at 20 936 kgs mainly due to increased production from New Hampton and the inclusion of Free Gold (50%).

Profit before tax increased by 106% from R412,4 million to R848,9 million. Taxation was R130 million higher at R233,8 million compared to the R104,7 million for the previous guarter.

Net profit after tax at R615,1 million was 100% more than the R307,7 million reported for the December quarter.

Earnings per share increased by 87% from 206 cents for the December 2001 guarter to 386 cents for the past guarter. Earnings for the nine months of the current financial year total 656 cents.

The performance of the operations are best highlighted in the following table:

|               |         | March<br>2002 | December<br>2001 | Variance<br>% |
|---------------|---------|---------------|------------------|---------------|
| Production    | kg      | 20 936        | 18 484           | 13,3          |
|               | oz      | 673 106       | 594 272          | 13,3          |
| Revenue       | R/kg    | 106 037       | 88 491           | 19,8          |
| Cash cost     | R/kg    | 65 392        | 63 863           | (2,4)         |
| Cash cost     | R/tonne | 228           | 238              | 4,2           |
| Revenue       | US\$/oz | 286           | 274              | 4,4           |
| Cash cost     | US\$/oz | 176           | 198              | 11,1          |
| Exchange rate | R/US\$  | 11,53         | 10,05            | (14,7)        |

The company achieved a US\$110 or 38% cash operating profit margin with cash costs of US\$176/oz. Working costs in R/kg terms increased marginally by 2,4% due to lower gold production caused by the recovery grade being lower by 2%. Cash costs in US\$ terms decreased from US\$198/oz to US\$176/oz.

The company reverted back to a more logical work arrangement around the Christmas break. Although tonnages for January 2002 were still affected, there was a dramatic improvement compared to the results for January 2001.

A quarter on quarter cash operating profit analysis of the various operations is as follows:

**TOTAL CASH OPERATING PROFIT (R'million)** 

|                       | -             | -                |          |
|-----------------------|---------------|------------------|----------|
| Operations            | March<br>2002 | December<br>2001 | Variance |
| Free State            | 145,4         | 87,5             | 57,9     |
| Evander               | 169,3         | 111,4            | 57,9     |
| Randfontein           | 198,0         | 150,3            | 47,7     |
| Elandskraal           | 115,2         | 87,2             | 28,0     |
| Kalgold               | 8,3           | 17,8             | (9,5)    |
| Australian Operations | 13,3          | 1,0              | 12,3     |
| Sub-total             | 649,5         | 455,2            | 194,3    |
| Free Gold (50%)       | 201,4         | _                | 201,4    |
| Total                 | 850,9         | 455,2            | 395,7    |
|                       |               |                  |          |

## Free State Operations – continue to improve

The Free State Operations reported a 66% increase in cash operating profits from R87,4 million to R145,4 million. These operations, although affected by the Christmas holidays, milled 996 000 tonnes at

a recovery grade of 4,4 g/t compared to the 1 074 000 tonnes at a recovery grade of 4,6 g/t for the previous quarter. To utilise mill capacity during the break, 96 000 tonnes from surface sources were treated which contributed an additional 30 kgs to gold production.

Our focus on reducing working costs resulted in a decrease of R21,4 million or 6% guarter on quarter. This impacted on the cost/tonne decreasing from R319 to R294. In US Dollar terms these operations are producing an annualised 600 000 ounces at cash costs of US\$197/oz.

Harmony 4 Shaft, which has been in closure mode for the past 12 months, will close by June 2002. The shaft has had the benefit of an increased gold price which resulted in postponement of the closure on a quarterly basis. The excellent teams at this mine will be re-deployed to mainly the Masimong 4 Shaft complex from which additional production is planned.

The gold price has had a positive impact on the viability of the Saaiplaas 3 Shaft complex. This mine which was purchased from AngloGold for R87 million in 1998 was closed due to the decrease in the gold price at the time. Mining regions which were accessible from Masimong 4 Shaft were previously included in that shaft's mining plan.

A re-evaluation of the Shaft Pillar Extraction Project shows an NPV of R109,1 million at a discounted rate of 17%. This project which requires capital expenditure of only R27,5 million, will return cashflows of R152,8 million over a four year period. Work on the project will commence during the June 2002 quarter.

## Saaiplaas 3 shaft pillar extraction

| Capital expenditure | R27,5 million  |
|---------------------|----------------|
| Tonnes milled       | 740 000        |
| Total kg recovered  | 3 808          |
| Total cost/tonne    | R270,00        |
| Life of project     | 4 years        |
| Gold price          | R100 000 kg    |
| NPV@17%             | R109,1 million |
|                     |                |

Although the decision to shut this shaft down soon after acquisition was a tough one, it has proved to be the right one. Instead of wasting the orebody by mining it at a loss it was maintained for a better gold price environment where it can now be mined at a profit.

## **Evander Operations – strength to strength**

Evander continues to deliver excellent results with a cash operating profit of R169,3 million. This is a 52% improvement on the R111,4 million reported for the December quarter.

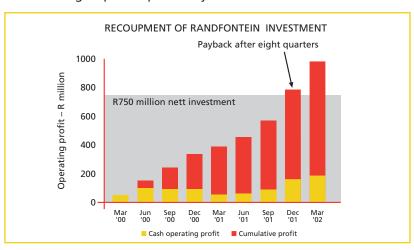

Costs in both R/tonne and R/kg decreased marginally due to a R7,1 million lower total working cost expenditure. More scope exists for further sustainable cost reductions. Total gold recovered was 3 230 kgs. In US\$/oz terms this operation reported the lowest cash costs in the company of US\$147/oz and was operating on a profit margin of US\$139/oz at a gold price of US\$286/oz.

Although the current R/kg gold price has had a favourable impact on the life of Evander 9 Shaft, the lack of availability of ore resources has finally resulted in its closure. This shaft, which has been in its closure phase with the final extraction of the shaft pillar, will cease operating at the end of June 2002. Employees at the shaft are in the process of being relocated to No. 2, 3 and 5 Shafts at Evander. These shafts which were re-opened earlier in the financial year are, following a period of investment in development programmes, contributing to cash operating profits. During the past quarter Evander 9 Shaft produced 36 000 tonnes at a grade of 3,8 g/t. The impact of the closure on the overall results from Evander will be negligible.

## **Randfontein Operations – excellent results**

The Randfontein operations returned a 32% improvement in cash operating profits, increasing from R150,3 million to R198,0 million. This improvement was mainly due to the gold price as kilograms produced were lower due to the impact of the public holidays on underground production. These operations produced 816 000 tonnes from underground at a recovery grade of 4,99 g/t.

In March 2002 these operations milled 816 000 tonnes at a recovery grade of 4,99 g/t. This resulted in a lower gold recovery of 4 070 kgs compared with 4 485 kgs for the December 2001 quarter. Kilograms from surface operations were marginally lower at 184 kgs compared to the 186 kgs reported previously.

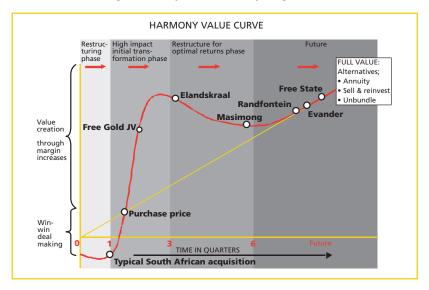

Randfontein reported a R14,0 million decrease in total working costs. In R/tonne terms cost decreased from R222/tonne to R205/tonne. These operations continue to contribute significantly to the company's cash flows with a US\$126 or 44% cash operating margin at a gold price of US\$286/oz.

Results at Randfontein will be affected by the expected decline in tonnage and grade at Cooke 1 Shaft by September 2002. Cooke 1 Shaft has over the past few quarters focussed on the extraction of the shaft pillar which has contributed 20 000 tonnes per month at a recovery grade of 4,7 g/t.

By December 2002 quarterly underground production at Randfontein is expected to decrease to 800 000 tonnes at a recovery grade of 5,0 g/t.

## **Elandskraal Operations – tough quarter**

As was the case with the majority of our previous acquisitions, Elandskraal is now in its "restructuring for optimal returns" phase on our value curve. The high overhead costs have been addressed and the implementation of the "Harmony Way" is well underway. These operations however now require flexibility in underground operations. The development programmes at Elandsrand and Deelkraal which were embarked on a year ago will in 9 to 12 months allow more mining flexibility and recovery in grades.

These operations reported cash operating profits of R115,2 million, an increase of 32% over the R87,2 million reported previously. Tonnage decreased marginally from 551 000 tonnes to 541 000 tonnes. The expected lack of flexibility at Elandskraal resulted in the recovery

grade decreasing from 6,3 g/t to 5,7 g/t. This has resulted in gold recovery from underground being 347 kgs less at 3 105 kgs compared to the 3 452 kgs for the December 2001 quarter.

The decrease in kilograms impacted adversely as the R/kg working costs increased by R6 342/kg to R71 398/kg, but in R/tonne terms underground working costs remained constant at R410/tonne. This is significantly higher than what was believed to be achievable and the same effort that was put into cost reductions at the other operations will now be focused on Elandskraal.

The Elandskraal operations with cash costs of US\$191/oz operate at a cash operating profit margin of US\$95/oz or 33% at a gold price of US\$286/oz.

## Kalgold Operations - can do better

Cash operating profits decreased to R8,3 million compared to the R17,8 million in the December 2001 quarter. This was mainly caused by the previously reported mill breakdown which resulted in 26 days of production time being lost by one of the two mills. Tonnage was lower at 218 000 tonnes compared to 256 000 tonnes reported previously. At a lower recovery grade of 1,88 g/t gold recovery decreased by 29% to 409 kgs.

A change in the nature of the orebody resulted in a higher ratio of high-grade refractory ore reporting to the mill. This has impacted on the recovery grade of these operations as residual values are higher than normal. An evaluation into improving metallurgical recovery using a flotation process is underway.

## **AUSTRALIAN OPERATIONS – welcome improvement**

This has been an extremely busy period for Harmony's Australian operations, with the highlights being:

- The successful acquisition of 99% of Hill 50 and a subsequent move to compulsory acquisition of the remaining minorities,
- Operating profits being reported at both operations,
  - The successful completion of the redevelopment of the seismically affected lower portions of the Big Bell underground mine, with the first stoping production blasts taken, and
  - The completion of the pre-stripping of the southern portion of the Trojan pit at Jubilee, giving us access to 8 months of higher grade material.

## Big Bell

During the quarter, Big Bell milled a total of 709 000 tonnes to produce 31 058 ounces. The operations returned an operational profit of A\$1,0 million.

Big Bell continued with its good performance (albeit at marginal grades) from the open pits. Ore is being sourced from four different pits. Lower grade remnant mining in the upper levels of the Big Bell underground mine ceased as these ore resources were exhausted.

The redevelopment and rehabilitation (after the seismic event of late 2000) of the lower levels of the Big Bell underground mine progressed well and two levels of the mine are accessible for stoping. Production is planned to increase to 65,000tpm for this area in the June quarter.

Exploration success has resulted in two new open pits being planned at City of Chester (15,000 oz resource to date) and Try Again (in excess 30,000 oz resource) whilst new extensions were discovered at the Rheingold and Chieftain pits. In the year since the acquisition of New Hampton, Harmony has by exploration successfully replaced the open pit resources it has mined out.

## **Jubilee**

During the quarter Jubilee milled 282 000 tonnes to produce 14 596oz for an operating profit of A\$1,2 million. Production from Jubilee was sourced in equal proportions from Trojan, the small Jubilee West pit and old stockpiles.

Although Jubilee has a lack of high-grade resources, these operations should produce steady profits from existing resources for at least 18 months and provide opportunities for exploration success.

The prestripping of the southern part of Trojan pit to expose the main part of the ore body was completed. At the end of March, and for the first time since Harmony's acquisition, a large block of reserves is available for mining.

Exploration drilling beneath the old Golden Ridge pit has demarcated the re-establishment of at least 35 000oz of production which has been scheduled for the March and June guarters of 2003.

Three separate grass roots exploration projects returned ore grade intersections at good widths during the quarter. Intensive follow up is in progress on all three projects. Whilst it is still too early to predict whether or not these discoveries will develop into sizeable reserves, these are the best exploration results Harmony has achieved to date in the Kalgoorlie area. This confirms the ongoing prospectivity of the Kalgoorlie region and bodes well for exciting exploration initiatives when we can combine the Harmony and Hill 50 land packages from April onwards.

The operations are expected to continue to show profits and positive cash flow after capital for the next 15 months if production targets are achieved. Upside opportunities will come from cost initiatives, certain synergies with Hill 50 and continuing to expose the company to the possibility of exploration success by judicious expenditure in this area.

## Bendigo - excellent progress

The advance of the decline and lateral development for ventilation at Bendigo, of which Harmony now own 31%, has progressed well since start-up at the end of December 2001 and is ahead of budget.

Changes to the development strategy and anticipated productivity improvements have resulted in the proposal of a new plan that should enable Bendigo to access and take the first development blast in the first orebody to be tested in September 2002 instead of December 2002 as originally envisaged.

Plans for bulk sampling, grade validation and metallurgical testwork are progressing on schedule.

### **CAPITAL EXPENDITURE**

| Operations      | March<br>Quarter<br>Actuals | June<br>Quarter<br>Forecast |

## **Accounting Policies**

The financial statements are prepared on the historical cost basis and in accordance with South African Statements of Generally Accepted Accounting Practice and International Accounting Standards. The accounting policies are, in all material respects, consistent with the annual financial statements for the year ended 30 June 2001.

Issued share capital: 159,6 million ordinary shares of 50 cents each. (December 2001: 149.1)

- Includes Hill 50 investment, which will be consolidated in results for next quarter.
- \*\* Significant variances in balances caused by inclusion of Free Gold Joint Venture (50%).
