

2008 FINANCIAL YEAR
DRDGOLD LIMITED

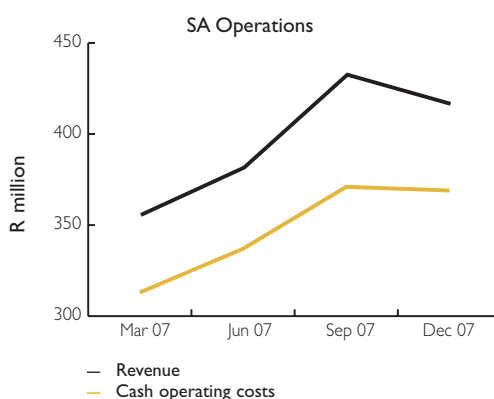

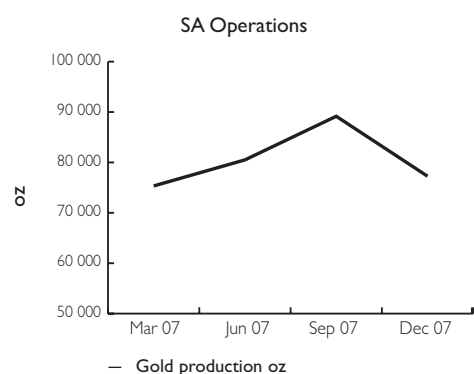

(Incorporated in the Republic of South Africa • Registration No. 1895/000926/06
 JSE share code: DRD • ISIN code: ZAE000058723
 Issuer code: DUSM • NASDAQ trading symbol: DROOY
 ("DRDGOLD" or "the company")

GROUP RESULTS
KEY FEATURES

- Sale of stake on Emperor completed
- Healthy cash balance
- Production impacted at Blyvoor due to a DME-imposed mine stoppage and at ERPM due to a sub-shaft man-winder motor problem
- Two-year wage settlement reached
- Measures to manage 'December' factor deliver results

FORWARD-LOOKING STATEMENTS

Many factors could cause the actual results, performance or achievements to be materially different from any future results, performance or achievements that may be expressed or implied by such forward-looking statements, including, among others, adverse changes or uncertainties in general economic conditions in the markets we serve, a drop in the gold price, a continuing strengthening of the Rand against the Dollar, regulatory developments adverse to DRDGOLD or difficulties in maintaining necessary licences or other governmental approvals, changes in DRDGOLD's competitive position, changes in business strategy, any major disruption in production at key facilities or adverse changes in foreign exchange rates and various other factors.

These risks include, without limitation, those described in the section entitled "Risk Factors" included in our annual report for the fiscal year ended 30 June 2007, which we filed with the United States Securities and Exchange Commission on 14 December 2007 on Form 20-F. You should not place undue reliance on these forward-looking statements, which speak only as of the date thereof. We do not undertake any obligation to publicly update or revise these forward-looking statements to reflect events or circumstances after the date of this report or to the occurrence of unanticipated events.

OVERVIEW

Dear shareholder

Safety

I am saddened to report that two employees died at the Blyvooruitzicht Gold Mining Company Limited ("Blyvoor") in underground work related accidents, during the quarter under review. Mr Ncedile Loloni, a loco guard, died in a tramping accident and Mr Abram Pwetwe, a stoper, died after being struck by a slab of rock scaled from the working face. In addition to

the above, Blyvoor has also reported disappointing increases in its dressing station injury frequency rate ("DSIFR"), from 40.35 to 43.6, its disabling injury frequency rate ("DIFR"), from 6.44 to 6.79, and its reportable injury frequency rate ("RIFR"), from 2.97 to 3.02.

At the East Rand Proprietary Mines Limited ("ERPM"), while the DSIFR improved from 67.60 to 60.50, the DIFR deteriorated from 6.33 to 8.43 and the RIFR from 3.21 to 6.32. Crown's DSIFR deteriorated from 13.98 to 18.22, the DIFR from 5.99 to 7.09, and the RIFR from 0.99 to 2.02.

Given these disappointing results, it is apposite that we have launched a behaviour-based safety initiative. Recent research indicates that behaviour is the cause of 76% of accidents, conditions and behaviour the cause of 20%, and conditions the cause of 4%.

On a positive note, Blyvoor's 10th consecutive win in 2007 of the West Rand Mine Managers' Association Inter-Mine Safety Competition with a RIFR of 3.136 was announced early in the current quarter.

Production

Group gold production from continuing operations for the quarter under review was 13% lower at 77 259oz. This was due primarily to the loss of seven production shifts at the Blyvoor mine in October 2007 arising from a stoppage imposed by the Department of Minerals and Energy's ("DME") Safety Inspectorate on underground mining operations following the aforementioned two fatalities, and to breakdowns of the main ventilation fan and sub-shaft man-winder motor at ERPM. The December month year on year was positive for both Blyvoor and ERPM.

Financial

Revenue was 4% lower at R416.9 million as a result of the lower gold production. After accounting for cash operating costs, virtually unchanged at R369.3 million, cash operating profit was 24% lower at R47.6 million.

Board appointments

It was with great pleasure that we announced during the quarter the appointment of Edmund Jeneker to the DRDGOLD Board of Directors. Edmund has extensive experience in business strategy and general management. We look forward enormously to his contribution to the company.

Looking ahead

While we remain firmly of the view that the Safety Inspectorate's seven-day stoppage of underground production during the quarter - with such serious consequences for the performance of the operation and the company as a whole - was unnecessary, it is pleasing to report that subsequently the parties are addressing their mutual concern about mine safety in a more pragmatic and constructive manner.

The breakdowns at ERPM demonstrate clearly the importance of ongoing, substantive infrastructure maintenance. From the outset, this has been a key element in our drive to return the South African operations to sustainable levels of stability, and will continue to be so into the future. In addition to growth, there is no other more sensible application of the company's healthy cash reserves.

Various role-players have voiced their disquiet regarding the implications for the South African mining industry of the electricity supply shortage, now and going forward. We share this concern of course, but believe that the most constructive course of action is for Government, Eskom and key, major consumers, such as ourselves, to continue to co-operate in both finding and applying workable solutions. We have, for example, some track record of success in working with Eskom over the past two years in effecting meaningful power savings at our Blyvoor operations. Co-operation between the parties most recently has resulted in Eskom committing to the provision of advance warning of impending power cuts which at least allows for a measure of planning and for safety at our operations.

We continue apace with project developments at each of our South African operations. At Blyvoor, delays on the Way Ahead ore replacement project will be made up and early, low-level production is expected to start, on schedule, in the September 2008 quarter. Exploration drilling to evaluate the south-west, down-dip extension of the ore body south of the Boulder Dyke is under way. At ERPM, the DME has approved overstoping of the exploration development into Extension 1, which will permit upgrading from a measured and indicated resource to a proven and probable reserve for the June 2008 annual ore reserve declaration. At Crown – now that the

Gauteng Heritage Resources Authority has dropped its opposition to our recovery of the Top Star dump we are ready to begin work almost as soon as a positive response from the DME to our application for a mining licence is received. At our Ergo 50:50 Joint Venture with Mintails, Phase 1 development is progressing and we look forward to the start of gold production from the refurbished Brakpan plant during the last quarter of this year.

JOHN SAYERS

Total gold production was 14% lower at 34 433oz, reflecting a 19% drop in underground gold production to 25 302oz. This was primarily a consequence of seven production shifts lost due to a stoppage imposed by the DME's Safety Inspectorate in October 2007 on underground mining operations following two fatalities.

Throughput from underground was 15% lower at 164 000t. The average underground yield was 5% lower at 4.80g/t, mainly due to the depletion of available ground in the Savuka boundary area. New mining face resulting from the Way Ahead Project will help to make up for this depletion.

Gold production from surface sources was 8% higher at 9 131oz, reflecting a 9% increase in throughput to 937 000t in order to partially offset the negative impact of the afore-mentioned stoppage of underground mining. The average surface yield was slightly lower at 0.30g/t due to increased throughput of lower-grade rock dump material.

Measures taken to minimise the impact of the Christmas break realised a production increase from underground year on year for the month of December of 10%.

Total cash operating costs rose by 17% to \$715/oz as a result of lower gold production from underground driving underground cash operating costs 23% higher to \$823/oz. Surface cash operating costs rose by 3% due to higher screening volumes. Cash operating profit was held steady at R19.6 million due to the higher average gold price received.

Capital expenditure increased by 24% to R17 million, the major items being raise boring costs associated with the development of a new ore pass system to permit the splitting of ore and waste and the installation of back-up power cabling for production and pumping at No 4 Shaft.

Development work on the Way Ahead Project fell slightly behind owing to the need to rehabilitate portions of the tunnel on 27 Level. Opening up and equipping continues however, on 27, 29, 31 and 33 levels, with early low-level production expected to begin, on schedule, during the first quarter of the new financial year.

	ZAR million	2.2	1.5	(47)	3.8	3.7	19.1	10.9

Gold production was 15% lower at 20 737oz due to a 14% decrease in the average yield to 0.30 g/t. This reflects the impact of higher volumes of 3L2 dump material reporting to the Crown plant which is lower in grade than the depleted sand material treated previously. Throughput was unchanged at 2 138 000t.

Cash operating costs rose by 20% to \$617/oz, primarily a consequence of lower production and the implementation of wage increases. Cash operating profit was 16% lower at R24.6 million.

We await a response from the DME to the company's application for a licence to mine the Top Star dump. A significant positive development during the quarter was notification published in the Gauteng Provincial Government Gazette from the Gauteng Heritage Resources Authority that it has lifted its objection to the mining of the dump.

Top Star is estimated to contain some 5.2 million tonnes of material at a recovered grade of 0.47g/t, yielding 78 000oz of gold. It is planned to retreat this material through the Crown plant over a 20-month period at a rate of approximately 260 000 tonnes per month.

	ZAR million	9.0	6.2	(45)	8.5	15.2	24.0	16.6

Total gold production was 11% lower at 22 089oz. This was due both to a 7% decline in underground gold production to 16 463oz and a 23% decline in surface gold production to 5 626oz.

While the average underground yield improved by 10% to 7.11g/t, underground throughput was 15% lower at 72 000t, reflecting the impact on underground production of both a main ventilation fan breakdown in October/November and the previously reported sub-shaft man-winder motor breakdown in December.

Surface throughput was steady at 504 000t, reflecting benefits flowing from the recent completion of infrastructure upgrades. The average surface yield was 22% lower at 0.35g/t, however, due to steps begun to improve the shape of the Cason Dump recovery face.

The effort that went into the reversal of negative trends from underground operations over to Christmas break realised a year-on-year production increase of 25% for the month of December.

Total cash operating costs were 26% higher at \$765/oz as a result of lower gold production. Underground cash operating costs rose by 20% to \$777/oz and surface cash operating costs by 42% to \$729/oz. Cash operating profit narrowed from R13.0 million to R3.5 million.

Capital expenditure rose by 45% to R9.0 million. Key items include repairs to the ventilation fan and man-winder motor, replacement of 900 metres of power feeder cable in the main vertical shaft, completion of the South West Vertical ("SWV") Shaft pumping upgrade and capitalisation of some costs relating to the Far East Vertical ("FEV") Shaft plugging project.

Following the completion of the SWV pumping upgrade, water from the Hercules Basin is now being pumped at a rate of between 13 and 17 megalitres a day. This contributes to a total of some 60 megalitres a day, the balance being pumped from the Central Witwatersrand Basin. Completion of the FEV plugging project to isolate the FEV Shaft from rising water in the Central Witwatersrand Basin is scheduled for completion in March 2008. Work to reduce the ERPM plant footprint, with consequent rehabilitation cost benefits, has been finished.

EXPLORATION AND DEVELOPMENT

	6 Mths to Dec 07	562	681	659	639
South Africa					
Blyvoor					
An exploration drilling programme to evaluate the southwest, down-dip extension of the ore body south of the Boulder Dyke is predominantly in the opening-up phase.					
Crown/ERGO					
RSG Global's final independent competent person's report for the Elsburg Tailings Complex upgrades the resource from an indicated to a measured resource (171.6 million tons at 0.30 g/t). Subsequent work is being undertaken to define uranium and sulphur resources for the dams.					
During the quarter, an additional 23 holes were drilled in an attempt to ensure that measured resources are declared. All sampling has been completed in the prescribed manner and submitted to an independent accredited laboratory for gold, uranium and sulphur assays.					
Current exploration, concentrated on defining the uranium potential of the current deposition sites, involves drilling a minimum of 10 holes per dump. To date, drilling has been undertaken at Rooikraal, Daggafontein and 3L8 dump.					
ERPM					
Prospecting from 73 East 4 for the major dip fault ahead of stoping operations did not intersect the fault at 65m in the 96.8m long borehole as expected. Drilling indicates that the fault has been laterally displaced by an east/west trending dyke. An additional hole will be drilled from 73 EI, north of the dyke, to verify the geological interpretation.					
ERPM Extension I (Sallies)					
The DME has approved the overstoping of the exploration development into ERPM Extension I. This will permit the upgrading of the said area from a measured and indicated resource to a proven and probable reserve for the June 2008 annual ore reserve declaration.					
During the quarter, prospecting was confined to the mining lease area. However, future drilling from 70 level footwall drive east will intersect reef, close to or within Extension I.
