

## Q2 2015 vs Q1 2015

- Gold production down 3% to 36 010 oz
- All-in sustaining costs down 7% to US\$1 149/oz
- Operating profit up 6% to R84.4 million
- Cash balance up 19% to R242.3 million

## HY2015 vs HY2014

- Gold production up 6% to 73 015 oz
- All-in sustaining costs down 5% to US\$1 194/oz
- Operating profit up 5% to R164.1 million
- EBITDA up 59% to R117.1 million

## REVIEW OF OPERATIONS

Group		Quarter 31 Dec 2014	Quarter 30 Sep 2014	% change	Quarter 31 Dec 2013 *Restated	6 months to 31 Dec 2014	6 months to 31 Dec 2013 *Restated	% change	6 months to 30 Jun 2014

## DEAR SHAREHOLDER

The previously-announced, planned test work on the flotation/fine-grind (FFG) circuit dominated the work programme at Ergo's Brakpan plant in the three months to December 2014. The return of our operating circuits to steady state in the preceding five months provided both a base case from which we could track the performance of the FFG circuit, and allowed us to do the required work in a measured way.

From the outset, the float circuit performed well, while the mills – although not fully optimised – managed to break down the composition of the float concentrate to a sufficiently small fraction to achieve the increase in soluble gold that we had set out to achieve. Actual gold production that we could separately measure, having isolated the high-grade throughput from the remainder of the plant, was consistent with the increase in dissolved gold. Residue values – a key efficiency indicator – decreased by the desired 0.03g/t.

We were particularly pleased that the test work had no adverse impact on gold production, in spite of the fact that one-third of total throughput – consisting mainly of higher grade material – was diverted into the FFG circuit for test work. Inventory or lock-up stabilised within the first month, while the remainder of test work had very little impact on gold output. We obtained valuable data from the trends we saw emerge. This helped us to decide on further ways to optimise the performance of the FFG circuit and the configuration of the plant, and we were able to re-start the remaining two lines of the FFG circuit in January 2015.

Towards the end of the quarter, the combined impact of electricity cuts by power utility Eskom and the flooding of one of the reclamation sites after a heavy summer downpour caused a slight drop in forecast production in a quarter that was otherwise, by and large, consistent with expectations.

This letter would not be complete without some input on the impact on us of the afore-mentioned power cuts. These were a consequence of "load-shedding" by Eskom – the term used by the power utility to describe its practice of cyclically switching off power to consumers in order to balance supply and demand while undertaking urgent and necessary maintenance.

In December, over a period of five days, the load-shedding roster caused a loss of 67 hours of production due to the fact that our operating footprint

extends over four different load-shedding zones. We have since managed to agree with Eskom a consumption curtailment agreement in terms of which we reduce, on request, total consumption by an agreed percentage during load-shedding hours. This means that, on the whole, we are able to maintain uninterrupted tonnage throughput but recoveries may reduce due to certain parts of the operating line going down during the load reduction periods.

With load-shedding having become far more frequent in late January and early February, we are testing different scenarios to decide the optimal configuration to address this requirement. Typically, in "Stage 1" and "Stage 2" load-shedding scenarios (shedding of up to 1 000 MW and 2 000 MW of the national load, respectively) we are required to reduce power consumption by up to 10% of base load. "Stage 3", which Eskom has so far managed to avoid, would require a reduction of 20%.

An important risk-mitigating measure that we implemented in the months after the suspension of the FFG in April 2014 was the installation of back-up power and other engineering upgrades to ensure that the plant is kept in a state of readiness during power interruptions. These measures have been put to the test several times during the last few months, and have all performed to specification. We have been able to resume full production without any delay after each power interruption.

## HALF YEAR TO 31 DECEMBER 2014 vs HALF YEAR TO 31 DECEMBER 2013

### Operational review

Gold production for the first six months of FY2015 was 6% higher at 73 015oz, compared with the first six months of FY2014. This was due to a 9% increase in the average yield to 0.196g/t, reflecting the restoration of metallurgical efficiencies and operating business improvements following the temporary suspension of the company's new FFG circuit in April 2014. Throughput for the six months under review was 3% lower at 11 591 000t due mainly to heavy summer rainfall and Eskom power cuts.

Cash operating costs were 5% higher at R370 101/kg, a consequence of additional costs associated with the running of one stream of the FFG circuit and the processing of sand material at the City Deep plant, and of general inflationary increases averaging 8.3% year-on-year. The same factors drove

all-in sustaining costs 4% higher to R421 497/kg, offset somewhat by a higher yield and lower capital expenditure of R48.1 million compared with R107.8 million.

#### **Financial review**

Revenue increased by 9% to R1 015.5 million, a consequence both of a 4% rise in gold sold to 74 301oz and in the average Rand gold price received to R439 418/kg. Operating profit was 5% higher at R164.1 million, after accounting for cash operating costs, 12% higher at R840.5 million.

While the operating margin was 3% weaker at 16.2% (a consequence of the FFG circuit test work, where one-third of production capacity was used but the full portion of fixed costs was incurred), the all-in sustaining costs margin strengthened to 4.1% due to lower capital expenditure.

Earnings before interest, taxes, depreciation and amortisation (EBITDA) were 59% higher at R117.1 million due mainly to higher operating profit, lower corporate costs, and a profit realised on the sale of non-core land. The headline loss narrowed by 92% to R1.0 million (0 South African cents per share).

#### **Q2 2015 vs Q1 2015**

##### **Operational review**

While the average yield rose 2% to 0.198g/t in the second quarter of FY2015 compared with the first quarter, throughput was 5% lower at 5 653 000t, resulting in a 3% decline in gold production to 36 010oz. Improved yield resulted both from the running of one of the FFG circuit's streams during test work and from improved head grades from the Crown/City section. Throughput was negatively impacted both by heavy rainfall and power cuts, prior to the signing of the afore-mentioned agreement with Eskom.

Gold sold was 6% lower at 36 010oz, a consequence of lower production and increased inventory.

Cash operating costs and all-in sustaining costs were 3% lower at R365 021/kg and R415 194/kg respectively, a consequence both of lower throughput and no Eskom winter tariff incurred during the quarter under review.

Capital expenditure was 92% higher at R31.6 million due to the capitalisation of back-up generators commissioned in October 2014.

##### **Financial review**

Revenue was 8% lower at R487.0 million, reflecting lower gold sales and a 2% decline in the average Rand gold price received to R434 802/kg.

After accounting for cash operating costs – 5% lower at R408.8 million due to lower throughput and no Eskom winter tariff applicable – operating profit was 6% higher at R84.4 million.

The operating margin strengthened to 17.3% from 15.1% and the all-in sustaining costs margin to 4.5% from 3.6%, a consequence of the factors outlined above.

EBITDA was 44% higher at R69.1 million due mainly to higher operating profit and a profit realised on the sale of non-core land. Headline earnings of R0.1 million (0 South African cents per share) were recorded compared with a headline loss of R1.1 million in the previous quarter (0 South African cents per share).

#### **Board changes**

Robert Hume retired as an independent, non-executive director and the chairman of the Audit and Risk Committee with effect from 31 October 2014. From 1 November 2014 Johan Holtzhausen assumed the chairmanship of the Audit and Risk Committee.

On 12 December 2014 the company announced Riaan Davel's appointment as CFO and as executive director of the company with effect from 6 January 2015.

#### **Looking ahead**

On 31 January 2015 we notified Village Main Reef Limited ("VMR") management of our support for the offer by Heaven-Sent Capital Management Group Company Limited to acquire the entire share capital of VMR for R12.25 per share. We own 3 285 714 unencumbered shares in VMR and a further 1 million encumbered shares are held in escrow.

At 31 December 2014, we carry an unrestricted cash balance of R228.4 million. We have decided though not to declare an interim dividend, but rather seek early redemption of the remaining balance of approximately R77 million still owing on our Domestic Medium Term Note Programme. This would represent the final payment of the notes that were used to finance capital expenditure.

Insofar as our operations are concerned, our near-term focus will be to optimise the FFG circuit amidst the new challenge of intermittent power supply.

#### **Niël Pretorius**

Chief Executive Officer

19 February 2015

The accompanying notes are an integral part of the condensed consolidated financial statements.

\* Refer to Note 2: Restatements.

## NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

### 1. BASIS OF PREPARATION

The condensed consolidated interim financial statements are prepared in accordance with the requirements of the JSE Limited Listings Requirements for interim reports. The listings requirements require interim reports to be prepared in accordance with the framework concepts and the measurement and recognition requirements of International Financial Reporting Standards ("IFRS") and SAICA Financial Reporting Guides as issued by the Accounting Practices Committee and Financial Reporting Pronouncements as issued by the Financial Reporting Standards Council and also, as a minimum, contain the information required by IAS 34 Interim Financial Reporting.

The accounting policies applied in the preparation of the condensed consolidated financial statements are in terms of IFRS and are consistent with those applied in the previous consolidated annual financial statements for the year ended 30 June 2014, except for the adoption of applicable revised and/or new standards issued by the International Accounting Standards Board.

The condensed consolidated interim financial statements of DRDGOLD Limited for the six months ended 31 December 2014 have not been reviewed by an independent auditor.

### 2. RESTATEMENTS

#### *Impact of changes in accounting policies*

The application of standards, amendments to standards and interpretations adopted for the first time did not have any effect on the financial position or financial performance of the group.

#### *Impact of applying IFRS 10 Consolidated Financial Statements on the quarterly and interim results*

The impact of the adoption of IFRS 10 and the resulting application of IFRIC 5 (refer below) was not quantified or reported on in the interim condensed consolidated financial statements for the six months ended 31 December 2013. The results for the comparative period ended 31 December 2013 as well as the statement of financial position at this date have been restated with the effects of these standards and interpretations where relevant.

The group has adopted IFRS 10 *Consolidated Financial Statements* and has reassessed the control conclusion for its investees at 1 July 2013. The group's previous accounting policy was to consolidate the Guardrisk Cell Captive as a special purpose entity (SPE) on a line-by-line basis. With the adoption of IFRS 10 *Consolidated Financial Statements* the Guardrisk Cell Captive is not considered to be controlled by the group and is therefore not consolidated with an effective date of 1 July 2013.

The Cell Captive cell # 170, of which DRDGOLD is a shareholder, holds funds that may be applied only towards the settlement of the DRDGOLD group's environmental rehabilitation obligations under financial guarantees issued by Guardrisk Insurance Company Limited to the Department of Mineral Resources (DMR). The group is therefore considered to have a right to the funds held in the Guardrisk Cell Captive and therefore recognised a reimbursive right to these funds in the hands of Ergo under IFRIC 5 *Interest arising from Decommissioning, Restoration and Environmental Rehabilitation Funds*.

## ADJUSTMENTS TO THE GROUP STATEMENT OF FINANCIAL POSITION

	31 Dec 2013 as stated previously	IFRS 10 and IFRIC 5	31 Dec 2013 restated
	Rm	Rm	Rm
At 31 December 2013

Diluted headline loss per share (cents)	(3.0)	–	(3.0)

### 3. IMPAIRMENTS

The group recorded an impairment of R7.4 million for the quarter consisting of:

- R0.5 million against the investment in West Wits Mining Limited; and
- R6.9 million against the investment in Village Main Reef Limited (refer note 7).

### 4. CASH AND CASH EQUIVALENTS

Included in cash and cash equivalents is restricted cash of R13.9 million (30 September 2014: R13.7 million) in the form of guarantees.

### 5. LOANS AND BORROWINGS

Included in loans and borrowings is a Domestic Medium Term Note Programme ("DMTN Programme") under which DRDGOLD can issue notes from time to time. DRDGOLD raised a total of R165 million under the DMTN Programme in July and September 2012. The different unsecured notes issued mature 12 (R20.0 million), 24 (R69.5 million) and 36 (R75.5 million) months from the date of issue and bear interest at the three-month Johannesburg Inter-bank Acceptance Rate (JIBAR) rate (currently 5.725%) plus a margin ranging from 4% to 5% per annum.

### 6. ASSETS AND LIABILITIES HELD FOR SALE

In line with the group's strategy to exit underground mining operations, management committed to a plan to sell certain of the underground mining and prospecting rights held by East Rand Proprietary Mines Limited ("ERPM"), including the related liabilities, during FY2014.

On 25 July 2014, DRDGOLD announced that its subsidiaries Ergo Mining Operations Proprietary Limited (EMO) and ERPM had collectively entered into an agreement to dispose of certain underground mining and prospecting rights held by ERPM, and certain other assets on the related mining areas, for an agreed consideration of approximately R220 million.

The disposal is subject to the fulfilment of various suspensive conditions including regulatory approvals required for disposals of this nature. A number of these suspensive conditions had not been fulfilled at the date of these interim condensed consolidated financial statements for the quarter and six months ended 31 December 2014.

### 7. SUBSEQUENT EVENTS

There were no significant subsequent events between the reporting date of 31 December 2014 and the date of issue of these interim condensed consolidated financial statements other than outlined below:

On 4 February 2015 Village Main Reef Limited (VMR) announced a firm intention offer by Heaven-Sent Capital Management Group Company Limited to acquire the entire issued share capital of VMR for a cash consideration of R12.25 per VMR share.

The unencumbered shares we own in VMR will at this price realise R40.2 million versus the carrying amount at 31 December 2014 of R24.1 million while the proceeds of the 1 million encumbered shares will follow the outcome of pending arbitration proceedings between DRDGOLD Limited and VMR, unless settlement is reached.

# The group only has one segment.

\* The difference between the profit before tax on the statement of profit or loss and other comprehensive income relates to corporate head office and all other.

There has been no material change to the technical information relating to, *inter alia*, the Group's reserves and resources, legal title to its mining and prospecting rights and legal proceedings relating to its mining and exploration activities as disclosed in the company's annual reports of 30 June 2014 and subsequent public announcements. The technical information referred to in this report has been reviewed by Vivian Labuschagne (PLATO), mineral and resource manager, a full-time employee of the company. He approved this information in writing before the publication of the report.

## FORWARD LOOKING STATEMENTS

Many factors could cause the actual results, performance or achievements to be materially different from any future results, performance or achievements that may be expressed or implied by such forward-looking statements, including, among others, adverse changes or uncertainties in general economic conditions in the markets we serve, a drop in the gold price, a sustained strengthening of the Rand against the Dollar, regulatory developments adverse to DRDGOLD or difficulties in maintaining necessary licenses or other governmental approvals, changes in DRDGOLD's competitive position, changes in business strategy, any major disruption in production at key facilities or adverse changes in foreign exchange rates and various other factors.

These risks include, without limitation, those described in the section entitled "Risk Factors" included in our integrated report for the fiscal year ended 30 June 2014, which we filed with the United States Securities and Exchange Commission on 31 October 2014 on Form 20-F. You should not place undue reliance on these forward-looking statements, which speak only as of the date thereof. We do not undertake any obligation to publicly update or revise these forward-looking statements to reflect events or circumstances after the date of this report or to the occurrence of unanticipated events. Any forward-looking statements included in this report have not been reviewed and reported on by DRDGOLD's auditors.
