*	Exploration and growth projects started	Headline earnings :	US\$ 5.9 million R 62.4 million	US\$ 2.7 million R 23.1 million

LETTER TO SHAREHOLDERS

Dear shareholder

Overall performance

In the first six months of the financial year - a period during which the gold price traded between US\$ 265 to US\$ 293 per ounce - DRD has produced creditable improvements in performance, compared with the same period last year. Gold production for the quarter at 269 069 ounces (8 369 kilograms) was 3% higher than the first quarter. Cash operating costs were well contained, decreasing in unit cost terms to US\$ 186 per ounce or R 60 617 per kilogram.

A 2% improvement in the dollar price of gold, with a 22% decline in the rand against the dollar, resulted in profit before taxation increasing by 100% to US\$ 7.8 million (152%: R 83.6 million) and headline earnings by 118% to US\$ 5.9 million (170%: R 62.4 million). The company continued with its hedge restructuring programme as promised and eliminated the balance of its "long gold" positions.

Operational performance

Blyvooruitzicht had another good quarter with production of 64 847 ounces (2 017 kilograms), similar to the previous quarter's level. Cash unit costs improved by 17% to US\$ 172 per ounce (R 55 881 per kilogram). The expansion programme is on target.

Gold output at the **North West Operations** increased by 2%, mainly as a result of increased tonnage. Cash unit costs were US\$ 189 per ounce (R 61 362 per kilogram), 19% lower than the first quarter. The drilling programme on the Gold Estate area will be completed by the end of January 2002.

Tolukuma was unable to sustain the previous quarter's performance. Production was down 7%, mainly as a result of lower yield from underground due to increased underground development. Cash costs were slightly up at US\$ 192 per ounce (R 63 016 per kilogram).

Production levels at the **Crown Operations** were better in the second quarter. Gold production was 13% higher, with improvements in both tonnage and grade. Cash unit costs were 23% lower at US\$ 198 per ounce (R 64 307 per kilogram).

Financial

The quarter saw a significant increase in net cash operating profit both in dollar and rand terms to US\$ 12.7 million (R 135.4 million) from US\$ 6.5 million (R 55.1 million) for the previous quarter. The continued improved operating performance as well as the repayment of the Western Areas advance and disposal of the associated share parcel, has resulted in a much stronger balance sheet. The interest-bearing debt:equity ratio decreased from 50% to 15% and the current ratio improved from 95% to 113%.

Hedge restructuring remains the company's most important objective and it is envisaged that Durban Roodepoort Deep, Limited will become an unhedged gold producer. To this aim we will be spending approximately US\$ 6.5 million (R 75 million) in buying back forward sales the next quarter.

Outlook

In view of the higher Rand gold price and the company's improved cash flow, a number of projects designed to increase gold production from 'old areas' are now under way. The consequent reduction in pay limits should increase reserves, and therefore mine lives, significantly. More information about these projects appears on page four.

MARK WELLESLEY-WOOD

COMMENTS

GROUP BALANCE SHEETS

11100	1116	otatei	HEHIO

Exceptional items represent the write down of assets at the closed Durban Deep mine.

Balance Sheets

- 4 476 557 Ordinary shares issued during the quarter for share options exercised.
- The Western Areas Limited advance of R 149.4 million was settled. Durban Roodepoort Deep, Limited has exercised its put option in respect of the associated share parcel which was offset against the amount due to Western Areas. Durban Roodepoort Deep, Limited has therefore discharged all of its obligations and realised a profit of US\$ 1.5 million (R 17.1 million) on the transaction.

<u>Other</u>

 Capital expenditure for the next quarter ending March 2002 are estimated at US\$ 1.2 million (R 14.4 million).

GROWTH PROJECTS

With the increased rand gold price, significant growth opportunities are available to Durban Roodepoort Deep, Limited which we are evaluating and exploiting.

The Blyvooruitzicht Expansion Programme is on track, increasing production monthly, to an additional 5 000 ounces (156 kilograms) a month by 2004, an improvement of 23%.

At the North West Operations, exploration of reefs outcropping on surface is continuing with initial results indicating a possible open-pittable resource in addition to the Black Reef currently being mined.

It is planned to increase production at Tolukuma by 45 000 ounces to 115 000 ounces per annum. The Kunda vein suggests potential for a small monthly tonnage of open-pittable ore. Further shallow drilling is planned. It is expected that the life will be enhanced with the exploration currently being undertaken.

The Milaihamba project, which contains the Kunda vein, will be accessed from underground and development on the twin haulage has started. A total of 93 trenches have been excavated, mapped and sampled to date on the Saki project.

SHARE OPTION SCHEME

The following summary provides information in respect of the Durban Roodepoort Deep (1996) Share Option Scheme as at 31 December 2001:

Number of options granted: 10 150 397 Number of options currently exercisable: 4 148 293

ACCOUNTING POLICIES

The financial statements are prepared on the historical cost basis and in accordance with South African Statements of Generally Accepted Accounting Practice. The accounting policies are, in all material respects, consistent with the annual financial statements for the year ended 30 June 2001.
